

## An elite portfolio of high-performing traits and technologies to help #defendyourields

The Agrisure® traits portfolio offers industry-leading insect control and the broadest collection of trait technology, featuring different trait stacks to fit the needs of any operation. These innovative trait stacks control up to 16 above- and below-ground insects and are available with the convenience of an integrated in-bag E-Z Refuge® seed blend and the most advanced water optimization technology on the market. The Agrisure portfolio has the best tools available to protect the genetic potential of today's most advanced hybrids.

### Control up to 16 above- and below-ground insects

The Agrisure traits portfolio features a variety of trait stacks that control both above- and below-ground insects. By combining the unrivaled above-ground control of the Agrisure Viptera® trait and the unique activity of the Agrisure Duracade® trait on corn rootworm, corn growers can build the industry's most comprehensive insect control strategy to protect their yields. Trait stacks with the Agrisure Duracade trait offer a unique mode of action that controls corn rootworm differently than other traits on the market.

- ▶ Control of up to 16 insects provides:
  - ▶ Stronger root systems
  - ▶ Increased water and nutrient uptake
  - ▶ Healthier plants that have increased photosynthetic capacity for maximum grain fill
  - ▶ More robust stalks that stand tall
  - ▶ Higher yield and improved grain quality

Trait stacks with above- and below-ground insect control:

# Industry-leading above-ground insect control

The Agrisure portfolio offers the most comprehensive above-ground insect control to ensure every seed has the chance to reach its full genetic potential. Trait stacks featuring the Agrisure Viptera trait offer industry-leading control of ear-, stalk- and leaf-feeding insects for:

- ▶ Less stand loss
- ▶ Noticeably healthier ears with less insect damage
- ▶ Reduced risk of mold and mycotoxin development for high-quality grain

Trait stacks with above-ground insect control:

## The most advanced water-optimization technology available in corn

All Agrisure trait stacks are also available in water-optimizing Agrisure Artesian® hybrids, maximizing yield when it rains and increasing yield when it doesn't. Artesian™ hybrids contain multiple genes for season-long drought protection and offer a practical option to meet water challenges. Trait stacks with Artesian technology are indicated by an 'A' at the end of the trait stack name.

## Commitment to innovation

Between 2005 and 2014, the Agrisure traits portfolio introduced six new technologies, more than any other trait supplier in agriculture today. A continued dedication to research and development, including cutting-edge technologies like molecular stacking and genome editing, is producing a rich pipeline of next-generation Agrisure traits.
