

The Numbering System for Golden Harvest Corn Hybrids

In order to streamline and simplify the seed selection process, Golden Harvest® uses a single, uniform hybrid numbering system.

The numbering system simplifies the seed selection process by providing the transparent identification of relative maturities and trait stacks in the hybrid. In addition:

- The numbering system clearly identifies the hybrid's relative maturity, genetics and traits.
- Clearer identification makes it easier for growers and Syngenta Seed Advisors to pick the best hybrids for their fields.

BENEFITS OF THE NUMBERING SYSTEM

- Simplifies complexity for Syngenta Seed Advisors and growers
- Clearly indicates relative maturity with first two digits
- Incorporates Agrisure® traits naming system and technologies

BREAKING DOWN THE NOMENCLATURE

The brand designator "G" indicates Golden Harvest.

G

9

9

Z

3

3

-

5

2

2

2

A

This two-digit number is the same as the last two digits of relative maturity.

The next letter and two-digit number are randomly designated to uniquely identify each genetic family.

The dash separates the genetic and trait portions.

The trait designator is aligned with the Agrisure traits nomenclature system.

"A" indicates the presence of Agrisure Artesian® technology for water optimization in the hybrid.

GROW *more*
CORN

Golden Harvest corn is the most innovative corn in the marketplace. Available through Syngenta Seed Advisors, Golden Harvest corn is powered by broad genetic diversity and industry-leading technology to help farmers grow more corn.
