RESTRICTED USE PESTICIDE
DUE TO ACUTE TOXICITY
FOR RETAIL SALE TO AND USE ONLY BY CERTIFIED APPLICATORS OR PERSONS UNDER THEIR DIRECT SUPERVISION AND ONLY FOR THOSE USES COVERED BY THE CERTIFIED APPLICATOR'S CERTIFICATION.

Herbicide
A Weed, Grass, and Harvest Aid Desiccant/Defoliant Herbicide

Active Ingredient:
Paraquat dichloride (1,1'-dimethyl-4,4'-bipyridinium dichloride) ........................................ 43.8%
Other Ingredients: .............................. 56.2%
Total: ...................................... 100.0%

Contains 3.0 pounds paraquat cation per gallon as 4.143 pounds salt per gallon. Contains stench (odor) and emetic.

KEEP OUT OF REACH OF CHILDREN.

DANGER/PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

EPA Reg. No. 100-1074
EPA Est. 100-TX-001
SCP 1074A-L2E 1003
169199

2.5 gallons
U.S. Standard Measure

• NEVER PUT INTO FOOD, DRINK OR OTHER CONTAINERS.
• IF SWALLOWED, TAKE IMMEDIATE ACTION AS PRESCRIBED IN FIRST AID. SYMPTOMS ARE PROLONGED AND PAINFUL.
• DO NOT USE OR STORE IN OR AROUND THE HOME.
• DO NOT REMOVE CONTENTS EXCEPT FOR IMMEDIATE USE.
• THE ODOR OF THIS PRODUCT IS FROM THE STENCHING AGENT WHICH HAS BEEN ADDED, NOT FROM PARAQUAT.
## FIRST AID
Contains Paraquat, a Bipyridylium Herbicide

<table>

</table>
| If swallowed       | • SPEED IS ESSENTIAL. Immediate medical attention is required. If available, give an adsorbent such as activated charcoal, bentonite or Fuller's Earth.  
• Call a poison control center or doctor immediately for treatment advice.  
• Do not give anything by mouth to an unconscious person. |
| If in eyes         | • Hold eye open and rinse slowly and gently with water for 15-20 minutes.  
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.  
• Call a poison control center or doctor for treatment advice. |
| If on skin or clothing | • Take off contaminated clothing.  
• Rinse skin immediately with plenty of water for 15-20 minutes.  
• Call a poison control center or doctor for treatment advice. |
| If inhaled         | • Move person to fresh air.  
• The odor of this product is from the stenching agent, which has been added, not from the paraquat.  
• If person is not breathing, call 911 or an ambulance.  
• Call a poison control center or doctor for further treatment advice. |

### NOTE TO PHYSICIAN
Refer to the booklet 'Paraquat Poisoning. A Practical Guide to Diagnosis, First Aid and Hospital Treatment'. (http://www.syngenta.com/pqmedguide/) Administer either activated charcoal (100g for adults or 2g/kg body weight in children) or Fuller’s Earth (15% solution; 1 liter for adults or 15ml/kg body weight in children). NOTE: The use of gastric lavage without administration of an adsorbent has not shown any clinical benefit. Do not use supplemental oxygen. Eye spashes from concentrated material should be treated by an eye specialist after initial treatment. With the possibility of late onset corneal ulceration, it is advised that patients with paraquat eye injuries are reviewed by an eye specialist the day after first presentation. Use treatment that is appropriate for chemical burns. Intact skin is an effective barrier to paraquat, however contact with irritated or cut skin or repeated contact with intact skin may result in poisoning.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

## PRECAUTIONARY STATEMENTS
Hazards to Humans and Domestic Animals

**DANGER/PELIGRO POISON**

May be fatal if swallowed. Fatal if inhaled. Causes substantial but temporary eye injury. Harmful if absorbed through skin. Do not get in eyes or on clothing. Avoid contact with skin. Do not breathe spray mist. Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove contaminated clothing and wash clothing before reuse.

**IMPORTANT:** Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal irritation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

### Personal Protective Equipment (PPE)
Applicators and other handlers (other than Mixers and Loaders) must wear:
- Long-sleeve shirt and long pants
- Shoes plus socks
- Protective eyewear
- Chemical Resistant Gloves – Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton).
- A dust mist NIOSH-approved respirator with any N, R, P, or HE filter.

Mixers and Loaders must wear:
- Long-sleeve shirt and long pants
- Shoes plus socks
- Protective eyewear plus a dust mist NIOSH-approved respirator with any N, R, P, or HE filter.
- Chemical Resistant Gloves – Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton).
- Chemical resistant apron
- Face Shield
Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

**Engineering Controls**

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

</tbody>
</table>

**Environmental Hazards**

**Wildlife:** This product is toxic to wildlife. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash waters.

**Drift:** Gramoxone Max is a contact herbicide that desiccates all green plant tissue. Paraquat dichloride is toxic to nontarget crops and plants if off-target movement occurs. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Do not apply under conditions involving possible drift to food, use, or consumption. Do not apply when weather conditions favor drift from treated areas. To avoid drift, do not make aerial applications during periods of thermal inversion. Refer to the local state laws, regulations, guidelines and spray drift information contained in the Directions for Use section for proper application to avoid off-target movement.

**Physical and Chemical Hazards**

This product is mildly corrosive to aluminum and produces hydrogen gas which may form a highly combustible gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. This product is compatible with high density polyethylene and rubber lined steel containers.

**CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY**

**NOTICE:** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product should be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, Inc. or Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of the product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and Buyer and User assume the risk of any such use. SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall SYNGENTA or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) Resulting FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitations of Warranty and of Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.
**DIRECTIONS FOR USE**

**Restricted Use Pesticide**
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**DO NOT USE AROUND HOME GARDENS, SCHOOLS, RECREATIONAL PARKS, GOLF COURSES OR PLAY-GROUNDS.**

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

**For Preplant or Preemergence (Broadcast or Banded), Chemical Fallow, Postemergence Directed Spray, Early Postemergence Broadcast in Peanuts and Dormant Season Applications, and “Between Cutting” Applications in Alfalfa:** Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

**For Harvest Aid and Desiccation Applications:** Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Shoes plus socks
- Protective eyewear
- Chemical Resistant Gloves – Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton).

### NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

**DO NOT** enter or allow others to enter the treated area until sprays have dried.

**AVOID** working in spray mist.

**KEEP** all unprotected persons out of operating areas or vicinity where there may be danger of drift.

Certain states may require more restrictive reentry intervals; consult your State Department of Agriculture for further information.

### STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

**Pesticide Storage**
Store at temperatures above 32°F. For help with any spill, leak or fire involving this material, call 1-800-888-8372.

**Pesticide Disposal**
Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**Container Disposal**
Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**CONTAINER IS NOT SAFE FOR FOOD, FEED OR DRINKING WATER!**
GENERAL INSTRUCTIONS AND INFORMATION

Do not apply this product through any type of irrigation system.
When Gramoxone Max is applied at less than 10 gallons per acre finished spray volume, a drift control or spray deposition additive SHOULD be used. Refer to the additive label for use directions.

Spray Drift Information
Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

1. The distance of the outer most nozzles on the boom must not exceed ¾ the length of the wingspan or rotor.
2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45°.

Where states have more stringent regulations, they shall be observed.

The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

Aerial Drift Reduction Advisory Information
(This section is advisory in nature and does not supersede the mandatory label requirements.)

Information on Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

Controlling Droplet Size
• Volume – Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
• Pressure – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
• Number of nozzles – Use the minimum number of nozzles that provide uniform coverage.
• Nozzle Orientation – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
• Nozzle Type – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

Boom Length
For some use patterns, reducing the effective boom length to less than ¾ of the wingspan or rotor length may further reduce drift without reducing swath width.

Application Height
Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making application at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

Wind
Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.
Temperature Inversions
Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas
The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

GENERAL INFORMATION
Gramoxone Max is a contact herbicide used to control or suppress a broad spectrum of emerged weeds. Gramoxone Max controls most small annual weeds – both broadleaves and grasses, and suppresses perennial weeds by destroying green foliage. Gramoxone Max can also be used as a desiccant/defoliant at harvest.
Gramoxone Max is formulated as a liquid which contains 3 lbs. of active ingredient per gallon. The formulation contains a nontoxic odor and an emetic (an agent which will induce vomiting if the product is swallowed). The odor is included in the formulation to help prevent accidental ingestion of Gramoxone Max.
Gramoxone Max is rapidly absorbed by green plant tissue and interacts with the photosynthetic process to produce superoxides which destroy the plant cells. Gramoxone Max requires actively growing green plant tissue to function. Thorough coverage of all green foliage is essential for effective weed control and for effective crop desiccation/defoliation. Gramoxone Max is not as effective on drought-stressed weeds, weeds with little green foliage (i.e., mowed or cut weeds), or mature woody bark of trees and vines.
Clay and organic matter rapidly tie up Gramoxone Max. As a result, Gramoxone Max has no residual soil activity to affect later-planted crops or later germinating weeds.

ROTATIONAL CROPS
All rotational crops may be planted immediately after the last application of Gramoxone Max.

RAINFASTNESS
Because Gramoxone Max is rapidly absorbed by the weed foliage, rain occurring 30 minutes or more after application will have no effect on the activity of Gramoxone Max.

APPLICATION
Since Gramoxone Max is a contact-type herbicide, it is essential to obtain complete coverage of target weeds to get good control. Improper application technique and/or application to large, stressed, or mown weeds will usually result in unacceptable weed control and unacceptable crop desiccation/defoliation. Complete coverage is also essential for good crop desiccation/defoliation. See details below for specific application instructions.

USE OF A NONIONIC SURFACANT OR CROP OIL CONCENTRATE
Always add one of the following (Failure to use one of the following at recommended rates will result in reduced performance of Gramoxone Max.)

Nonionic Surfactant: Add nonionic surfactant containing 75% or more surface-active agent at 0.125% v/v (1 pt./100 gals.), OR add a nonionic surfactant containing 50-74% surface-active agent at 0.25% v/v (2 pts./100 gals.), of the finished spray volume for ground applications. For aerial applications, add a nonionic surfactant at 0.25% v/v (2 pts./100 gals.) of the finished spray volume.

Crop Oil Concentrate: Add a nonphytotoxic crop oil concentrate containing 15-20% approved emulsifier, at 1.0% v/v (1 gal./100 gals.) of the finished spray volume for ground applications. For aerial applications, add 1 pt. of crop oil concentrate per acre. Do not use crop oil concentrate when using Gramoxone Max for cotton harvest aid.

NOZZLE SELECTION
The use of flat-fan nozzles will result in the most effective application of Gramoxone Max. Flood nozzles are generally not as good as flat fans since they produce large uneven droplets. The use of flood nozzles may result in reduced weed control due to inadequate coverage.
WHEN SPRAYING LESS THAN 20 GALLONS OF SPRAY CARRIER PER ACRE, USE ONLY FLAT FAN NOZZLES AS RECOMMENDED IN THE CHART BELOW.

Table 1. Recommended Nozzles, Pressures and Setup

<table>
<thead>
<tr>
<th>Nozzle Type</th>
<th>Flat Fan</th>
<th>Flood</th>
</tr>
</thead>
<tbody>
<tr>

<td>10 mph</td>
</tr>
<tr>
<td>Spray Overlap (at each edge)</td>
<td>30%</td>
<td>50%</td>
</tr>
</tbody>
</table>

Using nozzles, pressures, or setups different from the above chart will result in reduced control.

SPRAY CARRIER
Always use clean water (free of mud or clay), clear liquid nitrogen, or complete clear liquid fertilizers as the carrier when spraying Gramoxone Max. Muddy water, or suspension-type fertilizers containing clay, can inactivate Gramoxone Max. Never use suspension-type fertilizers containing clay as the spray carrier. If using a complete clear liquid fertilizer containing high phosphate levels as the spray carrier, always use the higher rate of Gramoxone Max and surfactant.

Note: When using liquid fertilizers such as 28% N as a spray carrier, it is important that nonionic surfactant still be used with Gramoxone Max. Liquid fertilizer carriers cannot substitute for surfactant.

RATES OF GRAMOXONE MAX
Follow recommended rates listed with each use of Gramoxone Max. Use the higher label rates when weeds are dense or large. Also, use higher label rates for harvest aid when crop vegetation is dense. For broadcast applications of Gramoxone Max with backpack sprayers, the application rate should not exceed 0.50 lbs. a.i./A in a minimum of 30 gallons of spray solution per acre.

SPRAY VOLUME
Follow recommended minimum spray volumes listed with each use of Gramoxone Max. These are minimum volumes only, and spray volumes should be increased as necessary to obtain complete coverage of the target weed or plant without runoff from the foliage.

WHEN SPRAYING LESS THAN 20 GALLONS OF SPRAY CARRIER PER ACRE, TARGET WEEDS SHOULD NOT EXCEED 6 INCHES IN HEIGHT.

APPLICATION TIMING
Gramoxone Max should be applied to emerged weeds when they are small. Weeds 1-6 inches in height are the easiest to control. Larger weeds may be more difficult to control. When weeds have been grazed or mowed, thus removing much of the green foliage, allow the weeds to regrow to a height of 2-4 inches before spraying if possible. Similarly, when forage or grain crops have been harvested prior to spraying, weeds present in the field will also have been cut. To allow for adequate green foliage to remain on weeds in this situation, raise cutter bars as high as possible from the ground to cut stubble and weeds at a greater height.

BURNDOWN OF GRASS COVER CROPS OR VOLUNTEER CEREALS
When using Gramoxone Max for control of grass cover crops or volunteer cereals, best results are obtained when Gramoxone Max is applied prior to tillering or after boot stage. This is especially important with a wheat cover crop or volunteer wheat. Treatments made between tillering and boot stage will generally not provide complete control. Do not expect complete control of perennial cover crops.
ENVIRONMENTAL CONDITIONS
Gramoxone Max is active over a wide range of environmental conditions. Cool weather (below 55°) will slow the activity of Gramoxone Max, as will cloudy, overcast weather, but will not affect performance.

SPOT SPRAYING
When only small areas are to be sprayed with labeled applications, it is advantageous to mix small quantities of Gramoxone Max. To aid in mixing small quantities, the following table should be consulted.

<table>
<thead>
<tr>
<th>If The Broadcast Rate Per Acre for Gramoxone Max is:</th>
<th>Add The Following Amount of Gramoxone Max to 1 Gallon of Water</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 1/2 pts.</td>
<td>1/3 fl. oz.</td>
</tr>
<tr>
<td>2 pts.</td>
<td>3/8 fl. oz.</td>
</tr>
<tr>
<td>2 1/2 pts.</td>
<td>1/2 fl. oz.</td>
</tr>
<tr>
<td>3 pts.</td>
<td>3/4 fl. oz.</td>
</tr>
</tbody>
</table>

Always add 1/3-1/2 fl. oz. of a nonionic surfactant for each gallon of spray. When spot spraying in this manner, spray to thoroughly wet the foliage, but not to the point of runoff.

TANK MIXING FOR IMPROVED BURNDOWN OF DIFFICULT WEEDS AND RESIDUAL WEED CONTROL
Photosynthetic Inhibitor Herbicides
Difficult weeds can often be controlled by tank mixing Gramoxone Max with other herbicides. The addition of herbicides which are also photosynthetic inhibitors (PSI) will slow the activity of Gramoxone Max, allowing Gramoxone Max to thoroughly distribute itself within the treated leaf. The resulting level of control is usually greater than if Gramoxone Max was applied alone.

Gramoxone Max may be applied in tank mixture with the following PSI herbicides:
- AAtrex® Herbicide
- Atrazine Herbicide
- Bicep MAGNUM® Herbicide
- Bicep Lite II MAGNUM® Herbicide
- Canopy® Herbicide
- Lorox® Herbicides

Refer to respective product label(s) for rates of application, directions for use, limitations, cautions and for a list of weeds controlled.

Improved Weed Control With PSI’s
Control of difficult weeds listed below and annual grass control will be enhanced by the addition of a PSI herbicide. For best results a second application is needed.

<table>

</tbody>
</table>

Improved Control of Perennial and Annual Broadleaf Weeds
When perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc. or difficult to control annual broadleaf weeds such as giant ragweed or morningglory are present, tank mixes with 2,4-D ester (Low Volatile), 2,4-DB or Banvel® herbicide, where labeled, will help improve control. Tank mixing the amine formulation of 2,4-D with Gramoxone Max may result in reduced grass control.

Order of Tank Mixing
In general, Gramoxone Max tank mixes with other products should be mixed as follows:
1. Fill spray tank 1/2 full with clean water or other approved carriers such as clear liquid fertilizer.
2. Begin tank agitation and continue throughout mixing and spraying.
3. Add dry formulations (WP, DF, etc.) to tank.
4. Add liquid formulations (SC, EC, L, etc.) to tank.
5. Add Gramoxone Max to tank.
6. Add nonionic surfactant to tank.
7. Fill remainder of spray tank.

Always refer to labels of other pesticide products for mixing directions and precautions which may differ from those outlined here.

Since many of the herbicides listed on this label are available in several types of formulations, it is advisable to perform a jar test to check physical compatibility.
**GENERAL PRECAUTIONS AND RESTRICTIONS**

**EQUIPMENT/CONTAINER**
Flush all spray equipment with water after use each day. Gramoxone Max is corrosive to aluminum. Aluminum spray equipment and aluminum aircraft structures that are exposed to spray solution or spray drift should be flushed thoroughly with water immediately after use.

In dry areas, dust stirred up by high winds or equipment tires can coat weed or plant leaves and reduce Gramoxone Max activity. Avoid applying Gramoxone Max in extremely dusty conditions.

**LIMITATIONS AND PRECAUTIONS**
- For Cotton Harvest Aid: Do not pasture livestock in treated fields or feed treated foliage.
- **DO NOT** use around home gardens, schools, recreational parks, or playgrounds.
- In preplant and preemergence (to the crop) uses, do not apply to soils lacking clay minerals, i.e., peat, muck, pure sand, artificial planting media.
- Seedbeds and plantbeds should be formed as far ahead of planting and treatment as possible to permit maximum weed and grass emergence prior to treatment.
- Seeding or transplanting should be done with a minimum amount of soil disturbance.
- Gramoxone Max used for preplant weed control over the top of plastic mulch may damage transplants which come in contact with the plastic. Sufficient rainfall or sprinkler irrigation to cause wash-off prior to planting may be needed to prevent damage to the crop.
- Weeds and grasses emerging after application of Gramoxone Max will not be controlled or suppressed.
- Unless otherwise indicated, crop plants emerged at time of application may be severely injured or killed if contacted by sprays of Gramoxone Max.

**APPLICATION INSTRUCTIONS**

The following tables indicate use patterns, rates, minimum spray volumes, preharvest intervals and other precautions, restrictions and comments specific to each crop. Read and follow directions carefully.

</table>
| ALFALFA | 2 | Broadcast | 0.7-1.3 pts. | Ground: 10 gals. Air: 10 gals. | 42 | • For control of weeds such as chickweed, downy brome and tansymustard.  
  • Use the 0.7 pt. rate of Gramoxone Max when weeds and grasses are less than 4” tall.  
  • Mix with 1-2 qts. of Velpar L per acre.  
  • Use the lower rate of Velpar L on loamy sands or sandy loams. Refer to Velpar L label for directions, limitations, cautions and for a list of weeds controlled.  
  • Apply once to established alfalfa stands during the dormant season.  
  • Do not apply if fall regrowth following last fall cutting is greater than 6”, or if spring regrowth is more than 2”.  
  • Do not apply to alfalfa during the first season after seeding.  
  • Temporary chlorosis may occur on alfalfa regrowth.  
  • Stress which may be caused in part by low fertility, disease, insects, winterkill, over cutting, drought or frost may increase the chances of crop injury.  
  • DO NOT USE on gravelly or rocky soils, exposed subsoils, hardpan, sand or poorly drained alkaline soils as crop injury, including mortality, may result.  
  • Do not cut or harvest within 42 days of application. |
| ALFALFA | 1 | Broadcast | 0.7-1.3 pts. | Ground: 10 gals. Air: 5 gals. | 60 | • For desiccation of weeds, including London rocket, sowthistle, rescue brome, wild oats, chickweed, ryegrass, bluegrass, cheatgrass, dogfennel, tansymustard, henbit, downy brome, and other winter annuals; and suppression of perennial weeds.  
  • Apply during late fall or winter months after the last fall cutting and before first spring cutting.  
  • In the California counties of Orange, Riverside, and all counties north of these counties, do not apply if spring regrowth after grazing or cutting is more than 2”. In all other areas within Region B, do not apply if regrowth after grazing or cutting is more than 2”.  
  • Do not harvest within 60 days of application.  
  • CAUTION: Applications to alfalfa that is not dormant, or has broken dormancy, may result in stand and/or yield reductions. Replanting may be necessary. Green alfalfa foliage present at the time of application will be burned.  
  • Total hay yield of first cutting may be reduced in alfalfa fields with severe weed infestation. This reduction will usually be directly proportionate to the loss of weed weight.  
  • Do not apply more than once per season.  
  • Tank mix with metribuzin (Lexone or Sencor) for improved burndown of weed vegetation and residual weed control in dormant established (at least 1-year old) alfalfa. Consult the metribuzin product label for a list of weeds controlled, rates of application, and precautions.  
  • Do not apply tank mix with metribuzin on newly established (less than 1-year old) alfalfa.  
  • California  
  • For desiccation of weeds including bluegrass, ryegrass, shepherdspurse, chickweed, tansymustard, foxtail, sowthistle and groundsel.  
  • Use high rate if ryegrass, shepherdspurse, sowthistle or groundsel is present. |

| ALFALFA              | 3                                       | Broadcast   | 0.7 pt.                     | Ground: 10 gals.             | 30                                     | • Weeds much beyond the seedling stage and the stubble of weeds cut off during harvest will be less affected by this treatment.  
• Apply immediately after alfalfa has been removed for hay or silage.  
• Do not treat more than 5 days after cutting.  
• CAUTION: First year alfalfa stands and yields may be reduced if alfalfa is allowed to regrow more than 2 inches.  
• Alfalfa foliage present at time of application will be burned.  
• In arid areas where moisture is limited, weed control may be reduced.  
• Do not cut or harvest within 30 days of application.  
• Make 1-3 applications, as needed, during the growing season. These sprays may be applied in addition to a dormant application.  
• For first-year alfalfa, do not apply more than twice during the first growing season. |

**ALFALFA**  
Between-cuttings treatment in established plantings. (Includes first year alfalfa)  
(All states East of the Rocky Mountains)  

**Desiccation of alfalfa to facilitate harvest of alfalfa seed**  

Air: 5-10 gals. | See Precautions | 2 | • Do not harvest until at least 4 days after application.  
• Do not apply when weather conditions favor drift from treated areas.  
• Do not apply by ground equipment within 25 ft., or by air within 75 ft. of lakes; reservoirs; rivers; permanent streams, marshes or natural ponds; estuaries; and commercial fish farm ponds.  
• For use only on fields in production of alfalfa seed. Not for use on fields producing alfalfa for livestock feed. No portion of the treated field, including seed, seed screenings, hay forage, or stubble, may be used for human or animal feed.  
• Do not cut current year’s treated alfalfa seed crop for hay or forage. Do not graze current year’s treated alfalfa seed crops.  
• Treated alfalfa seed is not to be used for sprouting. All alfalfa seed treated with Gramoxone Max/Reglone tank mix is to be tagged at processing plants, “NOT FOR HUMAN CONSUMPTION”. It shall be the grower’s responsibility to notify the processing plants of any seed crop treated with Gramoxone Max/Reglone tank mix.  
• Screenings from alfalfa seed processing are prohibited from feed channels. ALL Gramoxone Max/Reglone treated alfalfa seed screenings must be removed from the feed market. |

| CACAO                       | 5                                       | Directed Spray    | 1.3-2.7 pts.                | Ground: 50-200 gals.          | 1                                    | • Apply when weeds are succulent and growth is from 1-6".  
• For mature woody weeds, late-germinating weeds and grasses and for perennialic re-treatment or spot treatment may be necessary.  
• Do not allow spray to contact cacao plants as injury may result. Use a shield for young trees.  
• Do not spray under windy conditions.  
• Do not graze treated areas or feed treated cover crops to livestock. |
| CASSAVAS, TANIER & YAMS     | 3                                       | Shielded Post     | 1.3 pts.                    | Ground: 50 gals.              | 90                                   | • Apply when weeds are succulent and growth is 1-6".  
• On cassavas and taniers, do not make more than 3 applications per crop season.  
• On yams do not make more than 2 applications per crop season.  
• Do not allow spray to contact cassavas, tanier or yam plants as injury may result.  
• Do not spray under windy conditions.  
• Do not graze treated areas or feed treated forage to livestock. |
| CHEMICAL FALLOW             | 3                                       | Broadcast         | Weeds 1-3": 1.3-1.7 pts.   | Ground: 5 gals. air: 5 gals.   | –                                    | • Use higher spray volumes for better coverage as density of stubble, crop residue or weeds increase.  
• To control volunteer wheat or downy brome, fall-applied treatments generally work best with Gramoxone Max. If possible, tank mix with Atrazine for maximum burndown and residual control.  
• Apply from immediately after harvest up to emergence of the newly seeded crop as a broadcast or band treatment.  
• Cut wheat as high as possible to avoid cutting weeds too short, and allow the weeds to grow at least 2-3" after harvest before applying Gramoxone Max.  
• The addition of dicamba, (Banvel) or 2,4-D ester (Low Volatile) may aid in the suppression of emerged perennial broadleaf weeds and large annual broadleaf weeds.  
• Refer to 2,4-D ester (Low Volatile), Banvel, or residual herbicide label(s) for directions, limitations, cautions and for a listing of weeds controlled.  
• For extended weed control during the fallow period, tank mixes with registered residual herbicide combinations other than those listed on this label are permissible.  
• Weeds taller than 6" may not be controlled.  
• Weeds and grasses emerging after application will not be controlled.  
• Crop plants emerged at the time of application will be killed.  
• By ground application, apply 5-60 gallons of spray mix per acre. If applying at <10 GPA by ground, utilize the following additional precautions:  
  • Do not apply with floaters or exceed a speed of 10 mph.  
  • Apply with flat fan nozzles only at 30-40 psi.  
  • Apply only in a tank mix with atrazine at a minimum of 0.5 lb. a.i./acre.  
  • By air, apply in 5-10 gals. of spray mix per acre.  
| CHEMICAL FALLOW             | 3                                       | Broadcast         | Weeds 3-6": 1.7-2 pts.      | Ground: 5 gals. air: 5 gals.   | –                                    | • Make application at least 45 days prior to seeding.  
• Use at least 1.3 pts. of Gramoxone Max per acre with a PSI (see Photosynthetic Inhibitor Herbicides section) for volunteer wheat or downy brome control in the spring.  
• Refer to the Chemical Fallow General Information section. |

</table>
| CHEMICAL FALLOW Wheat-Fallow- Wheat Rotations (Fall applied after harvest; seeded 12-14 months later) | 3 | Broadcast | Weeds 1-3*: 1.3-1.7 pts. | Ground: 5 gals. | – | • Spray before weeds produce seed.  
• Volunteer wheat and downy brome control are better with late August or early September applications.  
• Tank mix with Atrazine, Marksman® Herbicide, or Command® Herbicide for enhanced burndown and residual weed control.  
• Tank mix with metribuzin, (Sencor 75DF) for burndown and residual control of grass and broadleaf weeds.  
• Refer to the product labels for specific use rates for your soil type, use directions, cautions and a list of weeds controlled.  
• Refer to the Chemical Fallow General Information section. |
| CHEMICAL FALLOW Wheat-Fallow- Wheat Rotations (Spring applied; seeded 3-5 months later) | 3 | Broadcast | Weeds 1-3*: 1.3-1.7 pts. | Ground: 5 gals. | – | • Application should be made March 1 to April 15, prior to spring rains to conserve moisture.  
• Volunteer wheat is easier to control after the boot stage, but soil moisture loss will be greater.  
• Use at least 1.3 pts. of Gramoxone Max per acre with a PSI (see Photosynthetic Inhibitor Herbicides section) for volunteer wheat or downy brome control in the spring.  
• Refer to the Chemical Fallow General Information section.  
• Tank mix with metribuzin, (Sencor 75DF/Lexone) for burndown and residual control of grass and broadleaf weeds.  
• Refer to the metribuzin, (Sencor 75DF/Lexone) label for use rates for your soil type, use directions, cautions, and weeds controlled. |
| CHEMICAL FALLOW Wheat-Annual Crop* Wheat Rotations (Fall applied in wheat stubble) | 3 | Broadcast | Weeds 1-3*: 1.3-1.7 pts. | Ground: 5 gals. | – | • Tank mix with Atrazine or Marksman for enhanced burndown and residual weed control. Refer to the labels for specific use rates for your soil type, use directions, cautions, and a list of weeds controlled.  
• Spray after wheat harvest and before weeds produce seed. If grasses such as foxtails or barnyardgrass recover, respray before they develop seed.  
• Volunteer wheat and downy brome are easier to control with late August to November applications.  
• Refer to the Chemical Fallow General Information section. |
| CHEMICAL FALLOW Wheat-Annual Crop-Wheat Rotations (Spring applied prior to planting an annual crop*) | 3 | Broadcast | Weeds 1-3*: 1.3-1.7 pts. | Ground: 5 gals. | – | • Tank mix with Atrazine for enhanced burndown and residual weed control. Refer to the labels for specific use rates for your soil type, use directions, cautions, and a list of weeds controlled.  
• Use at least 1.3 pts. of Gramoxone Max per acre with a PSI (see Photosynthetic Inhibitor Herbicides section) for volunteer wheat or downy brome control in the spring.  
• Follow the Atrazine recommendations pertaining to soil pH and recropping intervals.  
• Refer to the Chemical Fallow General Information section. |

*Approved Annual Crops are grain sorghum, corn, wheat, or proso millet.

| CLOVER AND OTHER LEGUMES<sup>1</sup>      |                                 | Broadcast   | 1.3-2.1 pts.                | Ground: 10 gals.  Air: 5 gals. | 60                                   | • For desiccation of weeds, including London rocket, sowthistle, rescue brome, wild oats, chickweed, ryegrass, bluegrass, cheatgrass, dogfennel, tansy mustard, henbit, downy brome, and other winter annuals, and suppression of perennial weeds.  
  • Apply during late fall or winter months after the last fall cutting and before first spring cutting.  
  • Do not apply if regrowth after grazing or cutting is more than 2".  
  • Do not harvest within 60 days of application.  
  • CAUTION: Applications to clover or other legumes that is not dormant, or have broken dormancy, may result in stand and/or yield reductions. Replanting may be necessary.  
  • Clover or other legumes foliage present at the time of application will be burned.  
  • Total hay yield of first cutting may be reduced in clover or other legumes fields with severe weed infestation. This reduction will usually be directly proportionate to the loss of weed weight.  
  • Do not apply more than once per season.  
  • Other legumes include velvetbean, lespedeza, lupine, saffron, trefoil, vetch, crown vetch, and milk vetch. |
| On established plantings: Region A-See Alfalfa section. | 1 Broadcast                | 0.7-1.3 pts.  | Ground: 10 gals.  Air: 5 gals. | 60                           |                                      |

<td>FIELD CORN, POPCORN, SWEET CORN, SEED CORN</td>
<td>3</td>
<td>Postemergence Directed Spray (Including Hooded or Shielded)</td>
<td>0.7-1.3 pts.</td>
<td>Ground: 10 gals.</td>
<td>–</td>
<td>• Apply when weeds are actively growing. • Use higher rate on larger or hard to control weeds. Weeds 6&quot; or taller may not be controlled. • Severe damage and/or complete kill can occur if spray contacts corn plants. <strong>HOODED OR SHIELDED SPRAYERS</strong> • To avoid excessive crop phytotoxicity, use a hooded or shielded sprayer with skids or wheels on the spray boom to maintain spray height. • Apply by directing spray between the rows and using hooded or shielded sprayers to prevent spray contact with crop plants. <strong>DIRECTED SPRAY WITHOUT HOODED OR SHIELDED SPRAYERS</strong> • Apply when corn is at least 10&quot; tall with nozzles arranged to spray no higher than the lower 3&quot; of corn stalks. • Corn plants shorter than 10&quot; may be injured and not recover (corn height measured from soil surface to top of whorl). • For corn greater than 20&quot; tall, arrange the nozzles to spray no higher than the lower 1/3 of the corn stalks. • Corn foliage sprayed will be injured, but the crop will recover and develop normally.</td>
</tr>
<tr>
<td>FIELD CORN ONLY (grain, fodder, forage)</td>
<td>1</td>
<td>Harvest Aid Broadcast</td>
<td>0.8-1.3 pts.</td>
<td>Ground: 20 gals. Air: 5 gals.</td>
<td>7</td>
<td>• Make ONE (1) application at least 7 days prior to harvest. • Apply after the corn is mature after the black layer has formed at the base of the kernels (this indicates maturity). Consult your local agricultural authority for help in identifying the black layer. • Add nonionic surfactant containing at least 75% surface active ingredient at 0.25% v/v. • Use 1.5 pts. to desiccate mature broadleaf weeds and grasses or broadleaf weeds and grasses that are taller than 18&quot;. • Drought stressed plants, especially broadleaf weeds, can be difficult to kill and desiccation may not be complete.</td>
</tr>
<tr>
<td>FIELD CORN ONLY (grain, fodder, forage) 2,4-D Amine Tank Mix</td>

</tbody>
</table>
| WESTERN COTTON Harvest aid for boll opening and early defoliation | 4 Broadcast | 3.7-5.4 fl oz. + phosphate or sodium chlorate; and/or other compatible harvest aid products | Ground: 10 gals. Air: 5 gals. | 7 | • Use higher rate of Gramoxone Max on rank cotton.  
  • Do not use more than 5.4 fl oz. of Gramoxone Max for early defoliation as excessive desiccation may occur.  
  • Early defoliation timing is when 60% or more of the bolls are open and the remaining bolls to be harvested are mature (approximately 4 NACB).  
  • Development of immature bolls will be inhibited.  
  • Do not use more than 4.0 lbs. of actual sodium chlorate defoliant per acre at this early defoliation timing. |
| WESTERN COTTON Harvest aid for boll opening and mid- to-late defoliation | 4 Broadcast | 5.4-10.7 fl oz. alone or tank mix with sodium chlorate or phosphate defoliant and/or other compatible harvest aid products | Ground: 10 gals. Air: 5 gals. | 3 (Alone) | • In desert cotton areas or on rank vigorous cotton, use the 10.7 fl oz. rate of Gramoxone Max.  
  • Mid-to-late defoliation timing is when 75% or more of the bolls are open and remaining bolls to be harvested are mature (approximately 3 or fewer NACB)  
  • Development of immature bolls will be inhibited. |
| COTTON Stripper or Spindle Harvested Harvest aid for defoliation and boll opening | 4 Broadcast | 2.1-7.5 fl oz. | Ground: 10 gals. Air: 5 gals. | 3 | • IT IS ADVISABLE, BECAUSE OF EXTREMES IN ENVIRONMENTAL AND PLANT CONDITIONS, TO APPLY THE RANGE OF RATES ON A SMALL BLOCK OF COTTON TO DETERMINE THE RATE THAT BEST FITS YOUR NEEDS.  
  • Apply when 75% of the bolls are open and the remaining bolls to be harvested are mature.  
  • DEVELOPMENT OF IMMATURE BOLLS WILL BE INHIBITED. SLICE BOLLS AND INSPECT THE SEED FOR MATURITY.  
  • Gramoxone Max may be applied alone or tank mixed with the following cotton harvest aids:  
    Accelerate Defoliant  
    Folex Defoliant  
    Def Defoliant  
    Harvade  
    Drop Defoliant  
    Harvest Growth  
    Ethephon Plant Regulant  
    Growth Regulant  
    Prep PGR  
  • May be applied as a split application. Do not exceed a total of 1.3 pts./A.  
  • To avoid leaf sticking, apply Gramoxone Max as a desiccant approximately 3-7 days after defoliation or a conditioning application and 7-14 days before harvest.  
  • Cooler temperatures may cause a longer waiting period between application of Gramoxone Max as a desiccant and defoliation/condition.  
  • Lower rates in the range may be necessary south of I-10 in Texas where temperatures are typically higher during defoliation. |

<td>3</td>
<td>IT IS ADVISABLE, BECAUSE OF EXTREMES IN ENVIRONMENTAL AND PLANT CONDITIONS, TO APPLY THE RANGE OF RATES ON A SMALL BLOCK TO DETERMINE THE RATE THAT BEST FITS YOUR NEEDS. May be applied as a split application. Do not exceed a total of 1.3 pts./A. Apply when 85% of the bolls are open and the remaining bolls to be harvested are mature (approximately 0 NACB). Development of immature bolls will be inhibited. Slice bolls and inspect the seed for maturity. Lower rates in the range may be necessary south of I-10 in Texas where temperatures are typically higher during defoliation. If a defoliation or conditioning application has been made, delay desiccation application of Gramoxone Max approximately 3-7 days to minimize leaf sticking. May be tank mixed with other harvest aid materials known to the local expert to be effective.</td>
</tr>
<tr>
<td>Cotton</td>
<td>4 Broadcast</td>
<td>0.75-1.25 pts.</td>
<td>Ground: 10 gals.</td>
<td></td>
<td>3</td>
<td>Use to desiccate regrowth occurring after defoliation or desiccation. Regrowth is difficult to control, therefore, thorough coverage with the full recommended rate is necessary. Control is dependent on growing conditions and desiccation of small new regrowth may not always be complete. Use higher rate if regrowth is excessive.</td>
</tr>
<tr>
<td>Easter Lilies (Field grown)</td>
<td>2 Preemergence</td>
<td>1.7-2.7 pts.</td>
<td>Ground: 10 gals.</td>
<td></td>
<td>–</td>
<td>Do not apply more than twice per season.</td>
</tr>
<tr>
<td>Fallow Land</td>
<td>2 Preplant</td>
<td>1.0-2.7 pts.</td>
<td>Ground: 10 gals.</td>
<td></td>
<td>–</td>
<td>Fallow land may be between operations such as disk ing, ripping, plowing, leveling, irrigating or listing for ground preparation purposes. Use for the control of weeds such as blue-grass, chickweed, henbit, downy brome, ryegrass, cheatgrass, dog fennel, tansy mustard, London rocket, sowthistle, rescue brome, wild oats, volunteer cereals and other winter annuals and for suppression of perennial weeds or sedges. Use the higher rate for weeds approaching the maximum size of 6”. Do not make more than 2 applications during the fallow period. Allow maximum weed emergence prior to application to maximize the benefit of this use. Adhere to the preharvest intervals and other crop specific restrictions for planted crops elsewhere on this label.</td>
</tr>
<tr>
<td>Grasses (For Seed)</td>
<td>3 Preplant</td>
<td>1.3-2.7 pts.</td>
<td>Ground: 10 gals.</td>
<td></td>
<td>–</td>
<td>Prepare the seedbeds and allow weeds to germinate. Apply Gramoxone Max when weeds are at the 3-5 leaf stage. Repeat applications as necessary prior to grass emergence. Do not graze treated areas or use the seed or straw from treated areas for animal feed or bedding.</td>
</tr>
<tr>
<td>Guar (Preharvest desiccation)</td>
<td>3 Preharvest</td>
<td>1.3 pts.</td>
<td>Ground: 10 gals.</td>
<td></td>
<td>4</td>
<td>Apply after the pods are fully mature. Do not graze treated areas or use the treated forage for animal feed.</td>
</tr>
<tr>
<td>Guava</td>
<td>4 Directed Spray</td>
<td>2.5 pts.</td>
<td>Ground: 10 gals.</td>
<td></td>
<td>–</td>
<td>Do not allow spray to contact green stems, fruit or foliage. Do not graze treated areas. Do not feed cover crops grown in treated areas to livestock. For mature woody weeds, late-germinating weeds and grasses, and perennials, retreatment or spot spraying may be necessary.</td>
</tr>

</table>
| HOPS (ID, OR, & WA only) | 3                                      | Directed Spray and/or Suckering and Stripping | 1.3 pts.                   | Ground: 10 gals.              | 14                                 | - Retreatment or spot treatment may be necessary.  
- Do not apply more than 3 times per season.  
- Do not allow spray to contact green stems, foliage, flowers, or cones as injury may result.  
- Do not allow animals to graze in treated hop-yards.  
- Hop vine refuse and silage may be fed to livestock.  
- For suckering and stripping, spray only the basal 2 ft. of the vines. Repeat as necessary.  
- Experience with varieties other than Cascade, Yakima Cluster, and Bullion is limited. If using Gramoxone Max on other varieties than these, test the use pattern on a small number of vines of each variety to determine sensitivity to injury. Do not use on unlisted varieties if unacceptable crop injury occurs.  
- Chemical Pruning: To burn back existing vines and obtain even emergence of subsequent vines, spray when vines are less than 3 ft. tall.  
- APPLICATION TO HOP VINES LESS THAN 6 FT. TALL MAY CAUSE UNACCEPTABLE INJURY. |
| LENTILS                 | 2                                      | Harvest Aid                        | 0.8-1.3 pts.               | Ground: 20 gals. Air: 7 gals. | 7                                  | - Add nonionic surfactant at 0.25% v/v (2 pts./100 gals.) of the finished spray volume.  
- May also be applied as a split application.  
- DO NOT make more than 2 applications or exceed a total of 1.3 pts./A. The split application may improve coverage.  
- Apply when crop is mature and at least 80% of the pods are yellowing and mostly ripe with no more than 30% of the leaves still green in color.  
- DO NOT apply when weather conditions favor spray drift. A drift control agent may be included to reduce spray drift.  
- NOT REGISTERED FOR USE ON LENTILS IN CALIFORNIA |
| MINT (Peppermint, Spearmint) | 2                                      | Dormant Season                     | 1.3-2.0 pts.               | Ground: 10 gals. Air: 5 gals. | -                                  | - For suppression of weeds such as Italian ryegrass, prickly lettuce, groundsel, chickweed, downy brome and bluegrass.  
- Apply when crop is dormant before spring growth begins and when weeds are less than 6" tall.  
- Do not apply more than 2.0 pts./A per dormant season.  
- May be tank mixed with Sinbar® Herbicide (terbacil) weed killer for improved contact activity and residual control of Italian ryegrass, prickly lettuce and groundsel. Apply this tank mixture no more than once per season. Refer to the Sinbar label for rates, directions, and cautions and for a list of weeds controlled. |
| ONIONS (seeded) AND GARLIC | 1                                      | Preplant/ Preemergence             | 1.7-2.7 pts.               | Ground: 10 gals.              | 60/200 (CA only)                    | - Use the higher rate for heavy weed infestations or wild oat control. Apply only one application per season at the 2.7 pts./A dosage.  
- Allow maximum weed and grass emergence prior to treatment but apply prior to crop emergence.  
- Apply a maximum of 2.7 pts./A per season. |
| PASSION FRUIT           | 5                                      | Directed Spray                    | 2.5 pts.                   | Ground: 10 gals.              | -                                  | - Use a shield or wrap vine if bark is still green at application time.  
- If application is to be made during harvest season, pick all fruit off the ground prior to application.  
- Do not allow animals to graze on treated areas.  
- Retreatment or spot treatment may be necessary. |

</thead>
</table>
| **SOYBEANS**    | 3                                       | Preplant or Preemergence   | Weeds 1-3*: 1.3-1.7 pts.    | Ground: 10 gals.             | –                                     | • Do not exceed a total of 4.0 pts. of Gramoxone Max per season.  
• Apply as a broadcast spray before, during or after planting, but before crop emergence.  
• For improved burndown or residual control, Gramoxone Max may be tank mixed with the following herbicides:  
  2,4-DB  
  Canopy  
  Lorox  
  Dual MAGNUM  
  Prowl  
  Harmony Extra  
  Scepter Herbicide  
  Goal  
  Pursuit Herbicide  
  Sencor Herbicide  
  Lasso  
  Surflan® Herbicide  
  Lexone  
  Turbo Herbicide  
  Linex  
• The rate of Gramoxone Max to be used in these tank mixtures is dependent on weed height and growing conditions. Use the highest recommended rate of Gramoxone Max under dry conditions or where the weed canopy is dense. Refer to the specific tank mix herbicide label(s) for rates, directions, limitations, and cautions and for a list of weeds controlled.  
• The lower rate may be used when weeds are less than 4" tall and a selective postemergence spray or cultivation will be made within 3 weeks after planting.  
• Seeding should be done with a minimum amount of soil disturbance.  
• Do not graze or harvest for forage or hay before the R3 stage of soybean development (early pod). |
| **SOYBEANS** 2,4-D ester (Low Volatile) Tank Mix | 3                                       | Preplant or Preemergence   | Weeds 1-3*: 1.3-1.7 pts.    | Ground: 10 gals.             | –                                     | • Apply 2,4-D ester (Low Volatile) at 0.35-0.475 lbs. a.i./A at least 7 days prior to planting.  
• Apply 2,4-D ester (Low Volatile) at 0.475-0.95 lbs. a.i./A at least 30 days prior to planting.  
• Do not apply 2,4-D ester (Low Volatile) prior to planting soybeans if you are not prepared to accept the results of soybean injury including possible loss of stand and yield.  
• Do not use the amine formulation as Gramoxone Max activity may be reduced.  
• May be tank mixed with residual herbicides listed above.  
• Refer to the 2,4-D ester (Low Volatile) label for a list of rates, directions, limitations and cautions and for a list of weeds controlled. |

<td>Postemergence Directed Spray (Includes Hooded or Shielded)</td>
<td>–</td>
<td>General Comments Apply as a hooded, shielded or directed spray to avoid contact with cane foliage to prevent leaf burn and yield reduction. Make a second and final application, if necessary, when new weed growth is 2-6&quot; high. Do not graze treated areas or feed treated forage to livestock.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>— Florida —</td>
<td>2</td>
<td>1.3 pts. Ground: 50 gals.</td>
<td>–</td>
<td>For optimum results, apply in early spring (March-April) when weeds are small. Do not apply after June 1 as cane growth may be stunted and yields reduced.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>— Hawaii —</td>
<td>2</td>
<td>1.3 pts. Ground: 20 gals.</td>
<td>–</td>
<td>Do not apply after cane rows have closed in.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>— Louisiana —</td>
<td>2</td>
<td>0.7-2.0 pts. Ground: 20 gals.</td>
<td>30</td>
<td>For tiller control, apply when tillers are less than 18&quot; high. Use the higher rate for heavier weed infestations or tiller growth.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>— Florida &amp; Texas —</td>
<td>1</td>
<td>Harvest Aid 0.4-0.7 pt. Air: 5 gals.</td>
<td>–</td>
<td>Use higher rate under cool, cloudy weather conditions. Apply 3-14 days before burning and harvest.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SUNFLOWER</td>
<td>3</td>
<td>Preplant or Preemergence Broadcast or Banded Over Row 1.7-2.7 pts. Ground: 10 gals. Air: 5 gals.</td>

Do not use the 5.4 fl. oz. rate unless the alfalfa has at least 3 trifoliate leaves; the 10.7 fl. oz. rate unless the alfalfa has 6 trifoliate leaves; or rates over 10.7 oz. unless there are 9 trifoliate leaves.

RESIN SOAKING

Pines (Loblolly, Shortleaf, Longleaf, Slash, Virginia, Pond, Pitch, and Spruce Pines).

Tree Selection – Select trees to be treated from stands on sites not subject to periods of extreme drought stress as the dessicating effect of Gramoxone Max to pines is accentuated during such periods, causing a reduction in the amount of oleoresin deposited in the xylem. Select trees to be treated from vigorous, nonstagnated stands, either natural or planted. In stagnated stands or commercial timber stands, plan treating with Gramoxone Max not sooner than three years after a commercial thinning.

Application Directions – Apply Gramoxone Max diluted in water to a suitable wound in the tree trunk to bring the treatment into contact with the xylem (sapwood).

Bark Streaks or Cuts: This type of wound is made using a standard or rotary bark hack or a chainsaw chipping tool employed in naval stores work to remove a single 1-inch wide streak of bark about 1-2 ft. from ground level. The total length should not exceed 1/3 of the tree circumference. Multiple streaks or cuts can result in serious girdling of the trunk and premature death of the tree. A coarse spray (about 1.7-5.0 ml.) Gramoxone Max solution (1-5% cation, wt./wt. basis) should be applied to runoff to the exposed xylem, using a low-pressure sprayer. The amount of spray required per cut depends on tree circumference and the length of cut or streak (1/3 of circumference). For a 9-inch diameter tree, 3 ml. of spray will cover the 1-inch wide streak. Using 3 ml. of a 2 or 4% Gramoxone Max solution will result in application of 60 or 120 mg. Gramoxone Max per streak.

Time of Treatment: Resin soaking can occur from treatments made any time of the year; however, cool season treatments under nondrought conditions usually result in less severe pine beetle infestations and longer tree life.

Interval Between Treatment and Tree Harvest: The interval between application of Gramoxone Max and tree harvest should be a minimum of 6 months and preferably from 12-24 months. Intervals of over 6 months may not be possible under conditions of drought or serious pine beetle attacks, which may make early harvest necessary. The Gramoxone Max treatment may encourage beetle attack, or may cause premature death of the tree. Desiccation of the xylem tissue, rather than the desired resin soaking, may occur, and is more likely at higher dosage rates.

Effect on Stem Growth: Gramoxone Max treatment can result in reduced stem growth during the interval between treatment and tree harvest.

### Precautions, Restrictions and Comments

- For improved emerged weed control or extended weed control, Gramoxone Max may be tank mixed with other herbicides registered for this use. Refer to tank mix herbicide labels for specific directions, limitations, cautions and for a list of weeds controlled.

### Conservation Reserve, Federal Set-Aside, Conservation Compliance Programs

- **Crop**: Conservation Reserve, Federal Set-Aside, Conservation Compliance Programs (For use in compliance with the Federal Conservation Reserve Program or Federal set-aside programs)
- **Maximum Number of Applications Per Year**: 3
- **Use Pattern**: Broadcast
- **Gramoxone Max Rate Per Acre**: 1.7-2.7 pts.
- **Minimum Total Spray Per Acre**: Ground: 10 gals.  
  Air: 5 gals.
- **Grazing or Preharvest Interval (Days)**: –
- **Precautions, Restrictions and Comments**: For use in noncrop areas such as public airports, electric transformer stations, pipeline pumping stations, around commercial buildings, storage yards and other installations, fence lines or similar noncrop areas.
- Avoid contact with the foliage of ornamentals or desired plants.
- Repeat as necessary.

### Noncrop Uses

- **Crop**: Noncrop Uses
- **Maximum Number of Applications Per Year**: 10
- **Use Pattern**: Broadcast or Spot Treatment
- **Gramoxone Max Rate Per Acre**: 1.7-2.7 pts.
- **Minimum Total Spray Per Acre**: Ground: 10 gals.
- **Grazing or Preharvest Interval (Days)**: –
- **Precautions, Restrictions and Comments**: For use in noncrop areas such as public airports, electric transformer stations, pipeline pumping stations, around commercial buildings, storage yards and other installations, fence lines or similar noncrop areas.
- Avoid contact with the foliage of ornamentals or desired plants.
- Repeat as necessary.

### Pasture Reseeding

- **Crop**: Pasture Reseeding
- **Maximum Number of Applications Per Year**: 3
- **Use Pattern**: Broadcast
- **Gramoxone Max Rate Per Acre**: 0.7-1.3 pts.
- **Minimum Total Spray Per Acre**: Ground: 10 gals.  
  Air: 5 gals.
- **Grazing or Preharvest Interval (Days)**: See specific geographic recommendation
- **Precautions, Restrictions and Comments**: West of Cascade and Sierra Nevada Mountains
  - Apply in October through December after first fall rains and after weeds have emerged and sod has started new growth.
  - For best seeding results, apply on moderately to heavily grazed areas.
  - Do not use in areas with heavy sod and weed growth.
  - East of Rocky Mountains
  - Use the 1.3 pt. rate on vigorous or coarse sod species such as bromegrass.
  - Apply prior to, or at time of seeding grasses or forage legumes.
  - Apply only to grazed or mowed pastures not more than 3” in height at time of treatment.
- **Grazing or Preharvest Interval (Days)**: See specific geographic recommendation

### For Control of Endophyte-Fungus-Infected Fescue Forage Legume/Grass Mixture and Other Grass Pastures

- **Crop**: For Control of Endophyte-Fungus-Infected Fescue Forage Legume/Grass Mixture and Other Grass Pastures
- **Maximum Number of Applications Per Year**: 2
- **Use Pattern**: Broadcast (Split Application)
- **Gramoxone Max Rate Per Acre**: 0.7-1.3 pts. followed by 0.7-1.3 pts.
- **Minimum Total Spray Per Acre**: Ground: 10 gals.
- **Grazing or Preharvest Interval (Days)**: –
- **Precautions, Restrictions and Comments**: Use split applications of 10-21 days apart if necessary.
  - Do not exceed 2.6 pts./A total in preparation for reseeding.
  - For spring plantings, the initial application of 0.7-1.3 pts. may be made the previous fall.
  - Apply when fescue is actively growing and no more than 4” high.
  - To reduce the infestation of endophyte-infested grass, do not allow fescue to go to seed starting with the preceding year’s crop.

</thead>
</table>
| *For Prickly Pear Desiccation in Pastures | 10                                      | Spot Sprays | 0.8 fl. oz. per gallon of water | Spray to wet weed foliage     | –                                    | *Not for use in California.  
  - Knapsack, backpack sprayers, pump-up pressure sprayers, hand-guns, hand wands, and other hand-held equipment can be used to direct the spray onto weed foliage for spray to wet applications.  
  - Mix 0.8 fl. oz. of Gramoxone Max and ½ fl. oz. of a nonionic surfactant per gallon of water.  
  - Spray coverage should be uniform and provide complete cover of all green prickly pear foliage.  
  - Apply in May through September for best desiccation results.  
  - Do not use more than 1.6 pts. of Gramoxone Max per acre per year.  
  - Apply only to pastures with no more than 3” of height at time of treatment.  
  - For improved desiccation and perennial control of Prickly pear, tank mix with Grazon P+D Specialty herbicide at a rate of 1-2 fl. oz. per gallon of water.  
  - Refer to the Grazon P+D Specialty herbicide label for directions, restrictions, and precautions. |
| *For Juniper Species leaf moisture reduction or desiccation prior to Prescribed burning of pastures | 10                                      | Broadcast   | 1.3 pts.                    | Air: 5 gals.                  | –                                    | *Not for use in California.  
  - Use only in conjunction with prescribed burning as recommended and monitored by local SCS or University and Extension Range Specialists.  
  - Apply during hot, dry weather conditions (generally July and August).  
  - Use 2% v/v nonionic surfactant in a minimum of 5 gpa spray solution.  
  - Juniper leaf moisture content should be monitored; however, maximum leaf moisture reduction generally occurs 3-4 weeks after Gramoxone Max application.  
  - Significant soil moisture and/or wet weather conditions prior to or after application will decrease the potential for Juniper Crown burns.  
  - Cool or humid weather conditions also adversely affect leaf moisture reduction.  
  - Do not graze livestock after application or prior to burning. |
  - Apply Gramoxone Max for control of Downy and Japanese Brome.  
  - Apply in spring after 90% node formation of brome species, but before full bloom.  
  - Emerged native perennial grasses will be burned by application, but application after 90% node formation will allow adequate time for native grasses to recover and attain maximum growth in the use season.  
  - Do not apply more than 1.25 pts. Gramoxone Max per year.  
  - Apply only to pastures with no more than 3” of height at time of treatment. |

Herbicide
A Weed, Grass, and Harvest Aid Desiccant/Defoliant Herbicide
Active Ingredient:
Paraquat dichloride (1,1'-dihydroxy-4,4'-bipyridinium dichloride) . . . . . 43.8%
Other Ingredients: 56.2%
Total: 100.0%
Contains 3.0 pounds paraquat cation per gallon as 4.143 pounds salt per gallon.
Contains stench (odor) and emetic.
See directions for use in attached booklet.

Agricultural Use Requirements
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. Refer to supplemental labeling under "Agricultural Use Requirements" in the Directions for Use section for information about this standard.

RESERVED USE PESTICIDE
DUE TO ACUTE TOXICITY
FOR RETAIL SALE TO AND USE ONLY BY CERTIFIED APPLICATORS OR PERSONS UNDER THEIR DIRECT SUPERVISION AND ONLY FOR THOSE USES COVERED BY THE CERTIFIED APPLICATOR'S CERTIFICATION.

NEVER PUT INTO FOOD, DRINK OR OTHER CONTAINERS.
• IF SWALLOWED, TAKE IMMEDIATE ACTION AS PRESCRIBED IN FIRST AID. SYMPTOMS ARE PROLONGED AND PAINFUL.
• DO NOT USE OR STORE IN OR AROUND THE HOME.
• DO NOT REMOVE CONTENTS EXCEPT FOR IMMEDIATE USE.
• THE ODOR OF THIS PRODUCT IS FROM THE STENCHING AGENT WHICH HAS BEEN ADDED, NOT FROM PARAQUAT.

Precautionary Statements
Hazards to Humans and Domestic Animals
May be fatal if swallowed, Fatal if inhaled. Causes substantial but temporary eye injury. Harmful if absorbed through skin. Do not get in eyes or on clothing. Avoid contact with skin. Do not breathe spray mist. Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove contaminated clothing and wash clothing before reuse.

IMPORTANT: Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal irritation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

FIRST AID
If swallowed: SPEED IS ESSENTIAL. Immediate medical attention is required. If available, give an absorbent such as activated charcoal, bentonite or Fuller's Earth. Call a poison control center or doctor immediately for treatment advice. Do not give anything by mouth to an unconscious person. If in eyes: Hold eye open and rinse slowly and gently with plenty of water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

If skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for further treatment advice.

If inhaled: Move person to fresh air. The odor of this product is from the stenching agent, which has been added, not from the paraquat. If person is not breathing, call 911 or an ambulance. Call a poison control center or doctor for further treatment advice.

NOTE TO PHYSICIAN: Refer to the booklet "Paraquat Poisoning: A Practical Guide to Diagnosis, First Aid and Hospital Treatment". (http://www.syngenta.com/pqmedguide) Administer either activated charcoal (100g for adults or 2g/kg body weight in children) or Fuller’s Earth (50% solution, 1 liter for adults or 50g/kg body weight in children). NOTE: The use of gastric lavage without administration of an adsorbent has not shown any clinical benefit. Do not use supplemental oxygen. Eye spashes from concentrated material should be treated by an eye specialist after initial treatment. With the possibility of late onset corneal ulcera-
tion, it is advised that patients with paraquat eye injuries are reviewed by an eye specialist the day after first presentation. Use treatment that is appropriate for chemical burns. Intact skin is an effective barrier to paraquat, however contact with irritated or cut skin or repeated contact with intact skin may result in poisoning.

There are no antidotes. Remove patient from exposure whenever possible. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

Environmental Hazards
Wildlife: This product is toxic to wildlife. Do not apply directly to water or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash waters.

Drift: Gramoxone Max is a contact herbicide that desiccates all green plant tissue. Paraquat dichloride is toxic to non-target crops and plants if off-target movement occurs. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Do not apply under conditions involving possible drift to food, forage, or other plantings that might be damaged or the crops thereof rendered unfit for sale, use, or consumption. It is not to be applied when weather conditions favor drift from treated areas. Do not apply when winds greater than 10 mph are predicted or when weather conditions are not favorable for drift control.

Physical and Chemical Hazards
This product is mildly corrosive to aluminum and produces hydrogen gas which may form a highly combustable gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. This product is compatible with high density polyethylene and rubber lined steel containers.

Storage and Disposal
Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage
Do not contaminate water, food, or feed by storage or disposal. Store at temperatures above 32° F. For help with any spill, leak, or fire involving this material, call 1-800-888-8372.

Pesticide Disposal
Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Protection Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL
Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning, if burned, stay out of smoke.

CONTAINER IS NOT SAFE FOR FOOD, FEED OR DRINKING WATER!
