### NOTE TO PHYSICIAN

Early signs of intoxication include dilation of pupils, muscular incoordination, and muscular tremors. Toxicity following accidental ingestion of this product can be minimized by early administration of chemical adsorbents (e.g., activated charcoal).

If toxicity from exposure has progressed to cause severe vomiting, the extent of resultant fluid and electrolyte imbalance should be gauged. Appropriate supportive parenteral fluid replacement therapy should be given, along with other required supportive measures (such as maintenance of blood pressure levels and proper respiratory functionality) as indicated by clinical signs, symptoms, and measurements.

In severe cases, observations should continue for at least several days until clinical condition is stable and normal. Since abamectin is believed to enhance GABA activity in animals, it is probably wise to avoid drugs that enhance GABA activity (barbiturates, benzodiazepines, valproic acid) in patients with potentially toxic abamectin exposure.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

### HOT LINE NUMBER

For 24-Hour Medical Emergency Assistance (Human or Animal)
Or Chemical Emergency Assistance (Spill, Leak, Fire or Accident),
Call
1-800-888-8372
**PRECAUTIONARY STATEMENTS**

**Hazards to Humans and Domestic Animals**

**WARNING/AVISO**

May be fatal if swallowed or inhaled. Do not breathe vapor or spray mist. Harmful if absorbed through the skin. Causes moderate eye irritation. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

**Personal Protective Equipment**

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category A on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material – Category A (e.g., natural rubber ≥ 14mils)
- Shoes plus socks

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. DO NOT reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

**Engineering Controls**

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS.

**User Safety Recommendations**

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

**Environmental Hazards**

This pesticide is toxic to fish and wildlife.

Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from target areas. Do not contaminate water when disposing of equipment wash water or rinsate. This product is highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds while bees are foraging in or adjacent to the treatment area.
Use of this product may pose a risk to threatened and endangered species of fish, amphibians, crustaceans (including fresh water shrimp), and insects. All use of this product in the state of California should comply with the recommendations of the California Endangered Species Project. Before using this product in California, consult with your county agriculture commissioner to determine use limitations that apply in your area.

This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having a medium potential for reaching both surface water and aquatic sediment via runoff for several weeks to months after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of abamectin from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall is forecast to occur within 48 hours.

Attention: This product contains a chemical known to the State of California to cause birth defects or other reproductive harm.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, LLC or Seller. To the extent permitted by applicable law, Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. To the extent permitted by applicable law: (1) this warranty does not extend to the use of the product contrary to label instructions, or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and (2) Buyer and User assume the risk of any such use. TO THE EXTENT PERMITTED BY APPLICABLE LAW, SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS WARRANTED BY THIS LABEL.
To the extent permitted by applicable law, in no event shall SYNGENTA be liable for any incidental, consequential or special damages resulting from the use or handling of this product. TO THE EXTENT PERMITTED BY APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.

DIRECTIONS FOR USE
RESTRICTED USE PESTICIDE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers are allowed in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. Exception: For grape girdling, cane turning, and tying in grapes, do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 days.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls over short pants and short-sleeved shirt
- Chemical-resistant gloves made of any waterproof material – Category A (e.g., natural rubber ≥ 14mils)
- Shoes plus socks

FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR PEST CONTROL, AND/OR ILLEGAL RESIDUES.
USE INFORMATION

Agri-Mek SC is an aqueous-based soluble concentrate that will control specified pests on the crops listed on this label when the product is applied according to the Directions for Use. Thorough coverage of foliage is essential for good mite and insect control.

NOTE:

- Adjuvant Requirement: To avoid illegal crop residues, Agri-Mek SC must always be mixed with a non-phytotoxic non-ionic activator type wetting, spreading and/or penetrating spray adjuvant or horticultural oil (not a dormant oil) as specified in the Directions for Use for each crop on this label. Non-ionic activator type wetting, spreading and/or penetrating spray adjuvants include non-ionic surfactants (NIS) with at least 75% surface active agent and crop oil concentrates (COC), vegetable oil concentrates (VOC), methylated seed/vegetable oils (MSO) and organosilicones (OS) with at least 15% emulsifiers/surfactants and include blends of these non-ionic activator type spray adjuvants. Spray adjuvants must be compatible with Agri-Mek SC and must be used at concentrations specified on the spray adjuvant product label directions for use for the targeted crop unless more specific directions are provided in the Directions for Use for individual crops on this label. Do not use binder or sticker type adjuvants because these type adjuvants may reduce translaminar movement of the active ingredient into the plant. SYNGENTA recommends the use of a Chemical Producers and Distributors Association-certified spray adjuvant.

- Phytotoxicity and Tank Mix Compatibility: Agri-Mek SC has been tested for phytotoxicity and has a wide margin of safety on a variety of crops. Agri-Mek SC has also been tested and shown to have broad physical, biological, and non-phytotoxic compatibility with many commonly used pesticides, spray adjuvants and nutritional products. However, since it is not possible to test all potential mixtures, it is recommended that the user contact the supplier of all desired tank mix products for advice and/or pre-test, prior to commercial application, any previously unproven proposed mixtures with Agri-Mek SC. Conduct a jar test for physical compatibility of all components of the proposed mixture using proper concentrations of each mixture component. Pre-test the proposed mixture on a small area of the target crop under environmental and application conditions similar to the intended commercial application to ensure physical, biological, and non-phytotoxic compatibility. Agricultural products formulated with binder or sticker type components may reduce performance of Agri-Mek SC.

- Adjuvant Phytotoxicity Precaution: Since Agri-Mek SC must always be mixed with a spray adjuvant as instructed in the directions above, and spray adjuvants alone are known to cause phytotoxicity to certain crops under certain environmental conditions, do not use Agri-Mek SC on a spray-adjuvant sensitive crop unless the spray adjuvant supplier can confirm a known non-phytotoxic labeled use rate for the intended spray adjuvant on the target crop.

- New York State Restriction: Do not apply Agri-Mek SC with aircraft in New York State.

- Chemigation: Do not apply this product through any type of irrigation system.

SPRAY DRIFT

Responsibility

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determines the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions.

NOTE: When states have more stringent regulations, they must be observed.
Spray Drift Precautions for Application with Aircraft or Ground Application Equipment

• Apply Agri-Mek SC only when wind velocity favors on-target product deposition (approximately 3 to 10 mph).
• Do not apply with ground application equipment within 25 ft. of or with aircraft within 150 ft. of lakes, reservoirs, rivers, permanent streams, marshes, pot holes, natural ponds, estuaries, or commercial fish farm ponds.
• Do not cultivate within 25 ft. of the aquatic area to allow growth of a vegetative filter strip.
• Do not allow this product to drift onto non-target areas. Drift may result in illegal residues or injury to nontarget species. Risk of exposure to sensitive areas can be reduced by applying this product when the wind direction is away from the sensitive area.
• Do not apply when the weather conditions may cause drift.
• Avoid application when the temperature is high and/or the humidity is low. These conditions increase the evaporation of spray droplets and the likelihood of drift to aquatic areas.
• Do not apply when wind speed or wind gusts are greater than 15 mph.
• Do not apply when wind speed is below 2 mph because wind direction will vary and there is a high potential for inversion.

Observe the following precautions when using ground application to spray tree crops or hops in the vicinity of aquatic areas such as lakes, reservoirs, permanent streams, marshes, potholes, natural ponds, estuaries, or commercial fish ponds:
- Do not apply Agri-Mek SC when weather conditions favor drift to aquatic areas.
- Do not apply within 110 ft. upwind of aquatic areas or when wind speed is above 8 mph.
- Spray last 3 rows windward of aquatic areas using nozzles on one side only, with spray directed away from the aquatic areas.
- Avoid spray going over tops of trees by adjusting or turning off top nozzles. Shut off nozzles on the side away from the grove/orchard when spraying the outside row. Shut off nozzles when turning at ends of row and passing tree gaps in rows.

Spray Drift Precautions for Aerial Application

Drift Management Requirements
The following drift management requirements must be followed to avoid off-target movement from aerial applications to agricultural field crops.

• Outermost Nozzle Distance
The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.

• Nozzle Direction
Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.

• Maximum Wind Speed
Do not apply when wind speed is greater than 15 mph.
• Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

• Controlling Droplet Size
  Volume
  Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
  Pressure
  Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
  Number of Nozzles
  Use the minimum number of nozzles that provide uniform coverage.
  Nozzle Orientation
  Orienting nozzles so that the spray is released parallel to the air stream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
  Nozzle Type
  Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid-stream nozzles oriented straight back produce the largest droplets and the lowest drift.

• Boom Length
For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

• Application Height
Applications should not be made at a height greater than 10 ft. above the top of the target plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

• Swath Adjustment
When applications are made with a cross wind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind.

• Wind
Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application must be avoided below 2 mph due to variable wind direction and high inversion potential.

NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.
• Temperature and Humidity
To compensate for evaporation when applying Agri-Mek SC in low relative humidity, set up equipment to produce larger droplets. Evaporation of droplets is most severe when conditions are both hot and dry.

• Temperature Inversions
Agri-Mek SC must not be applied during a temperature inversion because the potential for drift is high. Temperature inversions restrict vertical air mixing, and this causes small, suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds that are common during inversions. Temperature inversions are characterized by temperatures that increase with altitude and are common on nights with limited cloud cover and light to no wind. Inversions begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, the movement of smoke from a ground source or an aircraft smoke generator can also identify inversions. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates, indicates good vertical air mixing.

Resistance Management
Agri-Mek SC is a Group 6 insecticide (contains the active ingredient abamectin). Because of the inherent risks of pests developing resistance to any product, it is strongly advised that Agri-Mek SC be used in a sound resistance management program. Treatment may not be effective against labeled pests if insect or mite tolerant strains develop. When applying Agri-Mek SC to plants that are hosts of labeled pests with multiple generations per crop per year, use resistance management practices.

Resistance management practices include, but are not limited to:
• rotating Agri-Mek SC with other products with different modes of action,
• avoiding treatment of successive generations with the Agri-Mek SC,
• using labeled rates at the specified spray intervals,
• using non-chemical alternatives such as beneficial arthropods,
• rotating susceptible to non-susceptible plants, and
• using various cultural practices.

For additional information regarding the implementation of these or other resistance management practices, consult your local agricultural advisor or company representative.

CROP USE DIRECTIONS
Applies
For control of European red mite, McDaniel spider mite, Tentiform leafminer, Twospotted spider mite, and White apple leafhopper
Apply Agri-Mek SC using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage. Adjust gallons of spray per acre based on size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite and insect control.
### Apples

Recommended Rate When Using Horticultural Spray Oil (not a dormant oil)

|                                        | 0.25% or 1 gal./A | Minimum of 1 gal./A |

¹The rate of Agri-Mek SC per 100 gal. is based on a volume of 400 gal./A dilute spray.

²To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray. Use the same amount of product/A in concentrate sprays as would be required for the dilute sprays to the same orchard/grove. This can result in use of less than 2.25 fl. oz./A on small trees.

**Use Restrictions – Apples**

- **PHI:** Do not apply within 28 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the targeted apple variety. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides.

*continued...*
When used alone or when other products are applied sequentially, the combination of Agri-Mek SC with horticultural spray oil can injure the fruit of certain apple varieties (e.g., russetting on light-skinned varieties such as Golden Delicious).

Applying the combination of Agri-Mek SC and horticultural spray oil fewer than 14 days before or after applying Captan® or other sulfur-containing products can result in phytoxicity and crop loss.

- **Application Method:** Ground application only. Do not apply with aircraft.
- **Amount of Water:** Do not apply in less than 40 gal. of water/A.
- **Maximum Amount per Application:** Do not apply more than 4.25 fl. oz./A (or 0.023 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application Interval:** If a second application is necessary, wait at least 21 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
- **Number of Applications:** Do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per growing season.
- **Maximum Amount per Season:** Do not apply more than 8.5 fl. oz./A (or 0.047 lb. ai./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.
- **Grazing:** Do not allow livestock to graze in treated orchards.

**Avocados**

For control of Avocado thrips

NOTE: Aerial vs. Ground Application: Apply Agri-Mek SC using ground application equipment or aircraft. Aerial application is permitted because of its importance to the avocado growing industry. However, aerial application is not the preferred method of application for the best control of thrips. With aerial application, the resulting level and duration of control of thrips could be less than with ground application.

Adjust gallons of spray per acre based on size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good mite and insect control.

### Avocados

</tbody>
</table>

**Use Restrictions - Avocados**

- **PHI:** Do not apply within 14 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on avocados. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides.  
  **Note:** To prevent crop injury, observe all precautions and restrictions on the horticultural spray oil label. When using horticultural spray oil concentrations above 2.0% treat a small test area before making a large-scale application.
- **Application Method:** Ground and aerial application are permitted.
- **Amount of Water:** Do not apply in less than 100 gal. of water with ground application equipment or 50 gal. of water with aircraft.
- **Maximum Amount per Application:** Do not apply more than 4.25 fl. oz./A (or 0.023 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application Interval:** Wait at least 30 days before repeating application of Agri-Mek SC or any other foliar applied abamectin-containing product.
- **Number of Applications:** Do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per season.
- **Maximum Amount per Season:** Do not apply more than 8.5 fl. oz./A (or 0.047 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per season.
- **Grazing:** Do not allow livestock to graze in treated orchards.

**Celeriac (Apium graveolens)**

For control of Twospotted spider mite

Apply Agri-Mek SC using conventional dilute or concentrate sprayers. Thorough coverage of the crop canopy is essential for optimum results. Inadequate crop coverage can result in reduced control.

**Celeriac**

<table>
<thead>
<tr>
<th>Pest</th>
<th>fl. oz./A</th>

| Twospotted spider mite    | 3.5       | • To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant. Do not use binder or sticker type adjuvants. (See Use Information section found at the beginning of this Agri-Mek SC label and Use Restrictions below.)  
  • Apply when mites first appear and repeat as necessary to maintain control. (See Use Restrictions below.) |

*continued...*
Use Restrictions – Celeriac

• **PHI:** Do not apply within 7 days of harvest.
• **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on celeriac. Carefully follow the Directions for Use and Precautions on the adjuvant label as well as the precautions in official local spray guides. Do not use binder or sticker type adjuvants.
• **Application Method:** Apply with ground application equipment only.
• **Amount of Water:** Do not apply in less than 20 gal. of water/A.
• **Application Interval:** Wait at least 7 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
• **Number of Applications:** For resistance management, do not make more than 2 sequential applications of Agri-Mek SC or any other foliar-applied abamectin-containing product.
• **Maximum Amount per Season:** After transplanting the celeriac, do not apply more than 10.25 fl. oz./A (or 0.056 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per season.

Citrus Fruit Crop Group (Crop Group 10)
Crops in this group are: Calamondin, Citrus citron, Citrus hybrids (includes chironja, tangelo, tangor), Grapefruit, Kumquat, Lemon, Lime, Mandarin (tangerine), Sour orange, Sweet orange, Pummelo, and Satsuma mandarin.

For control of Asian citrus psyllid, Broad mite, Citrus bud mite, Citrus leafminer, Citrus rust mite, Citrus thrips, and Twospotted spider mite
Thorough spray coverage is essential for good mite and insect control. Adjust gallons of spray per acre based on size and number of trees per acre as well as density of foliage.

• **Ground Application**
Apply using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage (or outside coverage for Asian citrus psyllid, citrus leafminer, or citrus thrips).

• **Aerial Application**
Aerial application is permitted only for control of citrus leafminer. With aerial application, the resulting level and duration of control of citrus leafminer could be less than with ground application.
Aerial application to citrus is not approved in California.

</tbody>
</table>

¹The rate of Agri-Mek SC per 100 gal. is based on a volume of 1,000 gal./A dilute spray.  
²For concentrate sprays, adjust the dosage to apply an amount/A equal to that used in full cover dilute spray.  
³Ground application: For best results, use 150-300 gal./A of spray mix with a minimum of 3 gal./A of horticultural spray oil (not a dormant oil) and apply at a ground speed of 1 to 1.5 MPH.  
⁴For best results, use a minimum of 500 gal./A of spray mix with a minimum of 0.5% horticultural spray oil (not a dormant oil).  
⁵For best results, use 100-250 gal./A of spray mix applied to achieve outside coverage.

continued…
Use Restrictions – Citrus Fruit Crop Group

- PHI: Do not apply within 7 days of harvest.
- Adjuvant Requirement: To avoid illegal residues, Agri-Mek SC must be mixed with a spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the intended target crop in the citrus crop group. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides. Refer to the Directions for Use table above for additional spray adjuvant instructions.
- Application Method:
  - To control citrus leafminer - Ground or aerial application is permitted; however, do not apply with aircraft to citrus in California. For aerial application use a minimum of 10 gallons of finished spray volume per acre. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures), use a greater volume of water to ensure adequate coverage.
  - All other pests - Ground application only. Do not apply with aircraft.
- Prohibited Use: To manage resistance, do not use in citrus nurseries.
- Application Interval: Wait at least 30 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
- Maximum Amount per Season:
  - Do not apply more than 8.5 fl. oz./A (or 0.047 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in any growing season.
  - Do not make more than 3 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product in any growing season.
- Grazing: Do not allow livestock to graze in treated orchards.

Cotton

For control of spider mites
Mix with water as indicated below. Thorough coverage of the crop is essential for optimum results. Inadequate coverage may result in reduced control.

Note:
- Agri-Mek SC may be applied with ground application equipment or aircraft.
- For best control of spider mites, apply Agri-Mek SC with ground application equipment. With aerial application, spray coverage and the resulting level and duration of control of mites may be less than with ground application.

</tr>
<tr>
<td>Twospotted spider mite</td>
<td></td>
<td>• West of the Rocky Mountains - the lower use rates may only be used on cotton less than 10 inches in height and applied only with ground equipment.</td>
</tr>
</tbody>
</table>

## Use Restrictions

- **PHI:** Do not apply within 20 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a surfactant approved for use on cotton. Carefully follow the Directions for Use and Precautions on the surfactant label as well as the precautions in official spray guides or on product labels.
- **Application Method:** Ground or aerial application is permitted.
- **Minimum Amount of Water:** Do not apply in fewer than 5 gallons of water per acre. Use sufficient volume to ensure thorough coverage.
- **Maximum Amount per Application:** Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application interval:** Wait at least 21 days before repeating application.
- **Maximum Amount per Season:** Do not apply more than 7.0 fl. oz./A (or 0.038 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per season.
- **Grazing Restriction:** Do not feed or allow livestock to graze treated cotton.
Cucurbit Vegetables Crop Group (Crop Group 9)

Crops in this group are: Chayote, Chinese waxgourd, Citron Melon, Cucumber, Gherkin, Edible Gourd, (includes hyotan, cucuzza, hechima, Chinese okra); Momordica spp., (includes balsam apple, balsam pear, bittermelon, Chinese cucumber); Muskemelon (hybrids and/or cultivars of *Cucumis melo*) includes true cantaloupe, cantaloupe, casaba, Crenshaw melon, golden pershaw melon, honeydew melon, honey balls, mango melon, Persian melon, pineapple melon, Santa Claus melon, and snake melon), Pumpkin, Summer Squash (includes crookneck squash, scallop squash, straightneck squash, vegetable marrow, zucchini), Winter Squash (includes butternut squash, calabaza, hubbard squash, acorn squash, spaghetti squash), and Watermelon (includes hybrids and/or varieties of *Citrullus lanatus*).

For Control of Leafminers and Spider Mites

Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage can result in reduced control.

**Note:**

- Apply Agri-Mek SC with ground application equipment or aircraft.
- For best control of leafminers and spider mites, apply Agri-Mek SC with ground application equipment. With aerial application, the resulting level and duration of control of leafminers and spider mites could be less than with ground application.

(See Use Information section found at the beginning of this Agri-Mek SC label and Use Restrictions below.) Use 1.75-2.5 fl. oz./A for low to moderate infestations and 3.5 fl. oz./A for severe infestations. Apply when adult leafminer flies or spider mites are first observed and repeat application, as needed, to maintain control within constraints of a sound resistance management program. (See Use Restrictions below.)</td>
</tr>
</tbody>
</table>

**Use Restrictions – Cucurbit Vegetables Crop Group**

- **PHI:** Do not apply within 7 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the intended target crop in the cucurbit crop group. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides. Do not use binder sticker type adjuvants.
- **Application Method:** Ground or aerial application is permitted; however do not apply with aircraft in New York State.
- **Amount of Water:** Do not apply in less than 20 gal. of water/A with ground application equipment. Do not apply in less than 5 gal. of water/A with aircraft. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures), use a greater volume of water to ensure adequate coverage.
- **Maximum Amount per Application**: Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application Interval**: Wait at least 7 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
- **Number of Applications**: For resistance management, do not make more than 2 sequential applications of Agri-Mek SC or any other foliar-applied abamectin-containing product.
- **Maximum Amount per Season**: Do not apply more than 10.25 fl. oz./A (or 0.056 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.

**Dry Beans**

Crops include: *Cicer arietinum* (chickpea, garbanzo bean); *Lupinus* spp. (including sweet lupine, white sweet lupine, white lupine, and grain lupine); *Phaseolus* spp. (including kidney bean, lima bean, mung bean, navy bean, pinto bean, snap bean, and waxbean); *Vicia faba* (broad bean, fava bean); *Vigna* spp. (including adzuki bean, asparagus bean, blackeyed pea, catjang, Chinese longbean, cowpea*, crowder pea, moth bean, mung bean, rice bean, southern pea, urd bean, and yardlong bean)

*For use on cowpeas that are grown only for dry seed. Do not allow livestock to graze cowpea forage and do not harvest cowpea forage or hay for use as livestock feed.

For control of *Liriomyza* leafminers and Spider Mites

Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage can result in reduced control.

**Note:**
- Apply Agri-Mek SC with ground application equipment or aircraft.
- For best control apply Agri-Mek SC with ground application equipment. With aerial application, the resulting control of leafminers and spider mites could be less than with ground application.

### Use Restrictions – Grapes

- **PHI:** Do not apply within 28 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the targeted grape variety. Although Agri-Mek SC has been tested in combination with a range of non-ionic activator type wetting, spreading and/or penetrating spray adjuvants for safety to grapes, it is impossible to test Agri-Mek SC with all potential spray adjuvants on all grape varieties under the variety of conditions that could cause crop injury. Therefore, when using Agri-Mek SC, carefully follow the Directions for Use and Precautions on the spray adjuvant label and in official local spray guides. Do not use binder or sticker type adjuvants.
- **Application Method:** Ground application only.
- **Amount of Water:** Do not apply in less than 50 gal. of water/A with conventional ground application equipment.
- When using an electro-static sprayer, less than 50 gal. of water/A can be used; however, do not use less than 5 gals. of water/A.
- **Maximum Amount per Application:** Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application Interval:** If a second application is necessary, wait at least 21 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
- **Number of Applications:** Do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per growing season.
- **Maximum Amount per Season:** Do not apply more than 7.0 fl. oz./A (0.038 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.
- **Grazing:** Do not allow livestock to graze in treated vineyards.
Herb Crop Subgroup (Crop Subgroup 19A)

Crops in this subgroup are: Angelica, Balm, Basil, Borage, Burnet, Camomile, Catnip, Chervil (dried), Chives, Chives (Chinese), Clary, Coriander (leaf), Cilantro (leaf), Costmary, Culantro (leaf), Curry (leaf), Dill weed, Horehound, Hyssop, Lavender, Lemongrass, Lovage (leaf), Marigold, Marjoram (Origanum species), Nasturtium, Parsley (dried), Pennyroyal, Rosemary, Rue, Sage, Summer and Winter savory, Sweet bay, Tansy, Tarragon, Thyme, Wintergreen, Woodruff, and Wormwood.

For control of Liriomyza leafminers and Spider Mites
Mix with water as indicated below. Apply thoroughly with ground application equipment as a foliar spray and ensure good upper and lower leaf coverage.

<table>
<thead>
<tr>
<th>Pest</th>

</tbody>
</table>

Use Restrictions – Herb Crop Subgroup (Crop Subgroup 19A)

• PHI: Do not apply within 14 days of harvest. For chives, do not apply within 7 days of harvest.
• Adjuvant Requirement: To avoid illegal residues Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the intended target crop in the herb crop subgroup 19A. Although Agri-Mek SC has been tested in combination with a range of non-ionic activator type wetting, spreading and/or penetrating spray adjuvants for safety to herbs, it is impossible to test Agri-Mek SC with all potential spray adjuvants on all herb types and varieties under the variety of conditions that could cause crop injury. Therefore, it is important to carefully follow the Directions for Use and Precautions on the spray adjuvant label and in official local spray guides. Do not use binder or sticker type adjuvants.
• Application Method: Apply with ground application equipment.
• Amount of Water: Use a minimum of 20 gal. of water/A.
• Maximum Amount per Application: Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
• Application Interval: Wait at least 7 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
• Number of Applications: For resistance management, do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per single cutting (harvest).
• Maximum Amount per Season: Do not apply more than 10.25 fl. oz./A (or 0.056 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per year.
Hops (Not approved for use in California)

For control of Twospotted spider mite

Mix with water as indicated below. Apply with ground application equipment as a foliar spray and ensure good upper and lower leaf coverage. Adjust gallons of spray per acre based on the size of plants and density of foliage. In any case, thorough coverage is essential for good control of twospotted spider mite. When using concentrate sprays, the amount of water is reduced, but the amount of Agri-Mek SC per acre must remain the same as for dilute sprays.

<td>• To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant. Do not use binder sticker type adjuvants. (See Use Information section found at the beginning of this Agri-Mek SC label and Use Restrictions below.) • Apply Agri-Mek SC when twospotted spider mites reach treatment thresholds. • For applications at 1/2 trellis growth (6-8 ft. height), apply 1.75-3.5 fl. oz./A in a minimum of 40 gal. of water/A. • For applications beyond 1/2 trellis growth, do not use less than 3.5 fl. oz./A in a minimum of 100 gal. of water/A.</td>
</tr>
</tbody>
</table>

Use Restrictions – Hops

• PHI: Do not apply within 28 days of harvest.
• Adjuvant Requirement: To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on hops. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides. Do not use binder or sticker type adjuvants.
• Application Method: Ground application only. Do not apply with aircraft.
• Application Interval: If a second application is necessary to maintain control, wait at least 21 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product and repeat application of Agri-Mek SC or any other foliar-applied abamectin-containing product only after an alternative miticide with a different mode of action has been used.
• Maximum Amount per Application: Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
• Maximum Number of Applications: Do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per growing season.
• Maximum Amount per Season: Do not apply more than 7.0 fl. oz./A (or 0.038 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.
• Grazing: Do not allow livestock to graze in treated hops yards.
Leafy Vegetables (except *Brassica* vegetables) Crop Group (Crop Group 4)

Crops in this group are: Amaranth (leafy Amaranth, Chinese spinach, tampala); Arugula (Roquette); Cardoon; Celery; Celtuce; Chervil; Chinese celery; Chrysanthemum, edible leaved and garland; Corn salad; Cress, garden and upland (yellow rocket and winter cress); Dandelion; Dock (Sorrel); Endive (escarole); Florence fennel; Lettuce, head and leaf; New Zealand Spinach; Orach; Parsley; Purslane, garden and winter; Radicchio (red chicory); Rhubarb; Spinach; Vine spinach; and Swiss chard.

For Control of Carmine spider mite, *Liriomyza* leafminers, and Twospotted spider mite

Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage can result in reduced control.

Note:

- Apply Agri-Mek SC with ground application equipment or aircraft.
- For best control of leafminers and spider mites, apply Agri-Mek SC with ground application equipment. With aerial application, the resulting level and duration of control of leafminers and spider mites could be less than with ground application.

**Use Restrictions – Leafy Vegetables Crop Group**

- **PHI:** Do not apply within 7 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the intended target crop in the leafy vegetable crop group. Although Agri-Mek SC has been tested in combination with a range of non-ionic activator type wetting, spreading and/or penetrating spray adjuvants for safety to leafy vegetables, it is impossible to test Agri-Mek SC with all potential spray adjuvants on all leafy vegetable types and varieties under the variety of conditions that could cause crop injury. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides. Do not use binder or sticker type adjuvants.
- **Application Method:** Ground or aerial application is permitted; however, do not apply with aircraft in New York State.
• **Prohibited Use:** For resistance management, do not use on leafy vegetables grown for transplanting.

• **Amount of Water:** Do not apply in less than 20 gal. of water/A with ground application equipment. Do not apply in less than 5 gal. of water per acre with aircraft. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures), use a greater volume of water to ensure adequate coverage.

• **Maximum Amount per Application:** Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.

• **Application Interval:** Wait at least 7 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.

• **Number of applications:** For resistance management, do not make more than 2 sequential applications of Agri-Mek SC or any other foliar-applied abamectin-containing product.

• **Maximum Amount per Season:** Do not apply more than 10.25 fl. oz./A (or 0.056 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per growing season.

---

**Mint (peppermint and spearmint)**

For control of Twospotted spider mite

Mix with water as indicated below. Thorough coverage of the crop canopy is essential for optimum results. Inadequate coverage can result in reduced control.

**Note:**

• Apply Agri-Mek SC with ground application equipment or aircraft.

• For best control of spider mites, apply Agri-Mek SC with ground application equipment. With aerial application, the resulting level and duration of control of spider mites could be less than with ground application.

**Mint**

• **Application Interval:** Wait at least 7 days before repeating application.

• **Number of Applications:** Make 2 consecutive applications of Agri-Mek SC, then rotate to a chemistry with a different mode of action. Make at least 2 applications of a chemistry with a different mode of action before making additional Agri-Mek SC applications. Do not make more than 2 sequential applications of Agri-Mek SC or any other foliar-applied abamectin-containing product.

• **Maximum Amount per Season:** Do not apply more than 10.25 fl. oz./A (or 0.056 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.

### Pears (including Oriental pear trees)

For control of European red mite, McDaniel spider mite, Pear psylla, Pear rust mite, Twospotted spider mite, and Yellow mite

Apply Agri-Mek SC using conventional dilute or concentrate ground application sprayers calibrated to deliver sufficient water for thorough coverage. Adjust gallons of spray per acre based on size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite and insect control.

<td>Apply Agri-Mek SC when spider mite or insect thresholds are reached. Make a second application, if needed, to maintain control. (See Use Restrictions below.)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1The rate of Agri-Mek SC per 100 gal. is based on a volume of 400 gal./A dilute spray.

2To determine the amount of product per acre for concentrate sprays, first determine the amount that would be required in a full cover dilute spray. Use the same amount of product/A in concentrate sprays as would be required for the dilute sprays to the same orchard/grove. This can result in use of less than 2.25 fl. oz./A on small trees.
Use Restrictions – Pears

• PHI: Do not apply within 28 days of harvest.
• Adjuvant Requirement: To avoid illegal residues, Agri-Mek SC must be mixed with a spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on pears. Carefully follow the Directions for Use and Precautions on the spray adjuvant label as well as the precautions in official local spray guides.
  – Applying the combination of Agri-Mek SC and horticultural spray oil fewer than 14 days before or after applying Captan® or other sulfur-containing products can result in phytotoxicity and crop loss.
• Application Method: Ground application only. Do not apply with aircraft.
• Amount of Water: Do not apply in less than 40 gal. of water/A.
• Maximum Amount per Application: Do not apply more than 4.25 fl. oz./A (or 0.023 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
• Application Interval: If a second application is necessary, wait at least 21 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
• Number of Applications: Do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per growing season.
• Maximum Amount per Season: Do not apply more than 8.5 fl. oz./A (or 0.047 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.
• Grazing: Do not allow livestock to graze in treated orchards.

Stone Fruit Crop Group (Crop Group 12)

Crops in this group are: apricot; cherry (sweet and tart); nectarine; peach; plum; plum (chickasaw, damson, and Japanese); plumcot, and prune (fresh).

For control of European red mite, Pacific spider mite, and Twospotted spider mite

Apply Agri-Mek SC using conventional dilute or concentrate sprayers calibrated to deliver sufficient water for thorough coverage. Adjust gallons of spray per acre based on size and number of trees per acre and density of foliage. In any case, thorough coverage is essential for good spider mite control.

Use the same amount of product per acre in concentrate sprays as would be required for the dilute sprays to the same orchard/grove. This can result in use of less than 2.25 fl. oz./A on small trees.

### Use Restrictions – Stone Fruit Crop Group

- **PHI:** Do not apply within 21 days of harvest.
- **Adjuvant Requirement:** To avoid illegal residues, Agri-Mek SC must be mixed with a spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the intended target crop in the stone fruit crop group. Carefully follow the Directions for Use and Precautions on the spray adjuvant label and in official local spray guides. See the Directions for Use table above for application instructions. Do not use binder or sticker type adjuvants.
- **Application Method:** Ground application only. Do not apply with aircraft.
- **Amount of Water:** Do not apply in less than 40 gal. of water/A.
- **Maximum Amount per Application**: Do not apply more than 4.25 fl. oz./A (or 0.023 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application Interval**: If a second application is needed, wait at least 21 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.
- **Number of Applications**: Do not make more than 2 applications of Agri-Mek SC or any other foliar-applied abamectin-containing product per growing season.
- **Maximum Amount per Season**: Do not apply more than 8.5 fl. oz./A (or 0.047 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.
- **Grazing**: Do not allow livestock to graze in treated orchards.

**Strawberries**

For control of **Strawberry spider mite** and **Twospotted spider mite**

Mix with water as indicated below. Apply with ground application equipment as a foliar spray and ensure thorough coverage on upper and lower leaf surfaces. Adjust spray volume and nozzle placement to ensure maximum coverage of tops and undersides of leaves.

### Use Restrictions – Strawberries

- **PHI**: Do not apply within 3 days of harvest.
- **Adjuvant Requirement**: To avoid illegal residues, Agri-Mek SC must be mixed with a surfactant approved for use on strawberries. Do not use binder or sticker type adjuvants. Carefully follow the Directions for Use and Precautions on the surfactant label as well as the precautions in official spray guides or on product labels.
- **Application Method**: Ground application only. Do not apply with aircraft.
- **Prohibited Use**: For resistance management purposes, do not use in strawberry nurseries.
- **Amount of Water**: Do not apply in less than 50 gals. of water/A with conventional ground application equipment. When using electro-static sprayers do not apply in less than 10 gallons of water/A.
- **Maximum Amount per Application**: Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per application.
- **Application Interval**: Wait at least 21 days after the second application before repeating application.
- **Maximum Amount per Season**: Do not apply more than 14 fl. oz./A (or 0.075 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product in a growing season.

Use Restrictions – Tuberous and Corm Vegetables Crop Subgroup

• PHI: Do not apply within 14 days of harvest.

• Adjuvant Requirement: To avoid illegal residues, Agri-Mek SC must be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant as instructed in the Use Information section found at the beginning of this Agri-Mek SC label. The spray adjuvant must be approved for use on the intended target crop in the tuberous and corm vegetables crop subgroup. Carefully follow the Directions for Use and Precautions on the spray adjuvant label and in official local spray guides. See the Directions for Use table above for application instructions. Do not use binder or sticker type adjuvants.

• Application Method: Ground or aerial application is permitted; however, do not apply with aircraft in New York State.

• Amount of Water: Do not apply in less than 20 gal. of water/A with ground application equipment. Do not apply in less than 5 gal. of water/A with aircraft. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures), use a greater volume of water to ensure adequate coverage.

• Maximum Amount per Application: Do not apply more than 3.5 fl. oz./A (or 0.019 lb. a.i./A) per application.

• Application Interval: Wait at least 7 days before repeating application of Agri-Mek SC or any other foliar-applied abamectin-containing product.

• Number of Applications: For resistance management, do not make more than 2 sequential applications of Agri-Mek SC or any other foliar-applied abamectin-containing product.

• Maximum Amount per Crop: Do not apply more than 10.25 fl. oz./A (or 0.056 lb. a.i./A) of Agri-Mek SC or any other foliar-applied abamectin-containing product per crop.

• Grazing: Do not allow livestock to graze or feed treated foliage to livestock.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage
Store in a tightly closed container in a cool, dry place.

Pesticide Disposal
Pesticide waste may be hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control agency, or the Hazardous Waste representative at the nearest EPA regional Office for guidance.

Container Handling
Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures allowed by state and local authorities.
