Quadris Top SB Helps Make Soybean Acres More Profitable

Soybean growers have one goal in mind—maximize yields to deliver a return on investment. Quadris Top® SB fungicide is a powerful tool to help soybeans yield strong so farmers receive up to a three times return on investment, even at $9.50 soybeans.

Quadris Top SB can help increase yield, maximize return on investment and enable soybean plants to manage environmental stress. Soybeans are able to reach their yield potential because of enhanced plant physiological responses, which enable plants to withstand less-than-ideal environmental conditions, such as drought and high temperatures. The late-season stress protection offered by Quadris Top SB allows soybeans to yield strong.

The Quadris Top SB advantage

- Allows soybean plants to develop larger and stronger roots for better supported plants that are better able to translocate water and nutrients
- Helps manage periods of water stress, both from too much or too little rain water
- Causes plants to stay green longer, utilizing the sun’s energy longer for extended pod development
- Offers physiological benefits and boosts yields an average of 4 to 8 bu/A in on-farm trials
- Impacts plant growth to produce larger beans, fuller pods and improved pod retention for better soybean harvests
- Combines two active ingredients to deliver effective disease control and resistance management
- Shows yield advantages over straight strobilurin chemistries, and offers both preventive and curative disease control
- Tank mixes with Endigo® ZC insecticide to target yield-robbing insects, and is proven to enhance yields and provide growers consistent returns

The above chart shows the yield results from a 2013 soybean fungicide trial in Lawrence County, Ark., comparing Quadris Top SB to competitor fungicide treatments and untreated soybeans.
The physiological benefits of a Quadris Top SB application enable soybeans to break through the yield barrier. With industry-leading technology from Syngenta, soybeans are able to thrive despite environmental stress and pest pressures, allowing farmers to grow more soybeans.

Unrivaled disease control
Quadris Top SB is a robust combination of an industry-leading strobilurin and one of the most powerful triazoles on the market. It exhibits preventive and curative activity to offer unsurpassed broad-spectrum control of foliar diseases, including strobilurin-resistant frogeye leaf spot. With two modes of action, Quadris Top SB delivers optimum performance.

Major diseases controlled
- Aerial blight (*Rhizoctonia solani*)
- Alternaria leaf spot (*Alternaria spp.*)
- Anthracnose (*Colletotrichum truncatum*)
- Asian soybean rust (*Phakopsora spp.*)
- Brown spot (*Septoria glycines*)
- Cercospora blight and leaf spot (*Cercospora kikuchii*)
- Frogeye leaf spot (*Cercospora sojina*), including strobilurin-resistant strains
- Pod and stem leaf blight (*Diaporthe phaseolorum*)
- Powdery mildew (*Microsphaera diffusa*)

Refer to label for a complete list of diseases controlled

The chart below shows the yield benefit of using Quadris Top SB compared to untreated soybeans.
