MIRAVIS: ONE GIANT LEAP FOR PEANUT GROWING

Leaf spot can be relentless, requiring intensive management and frequent fungicide applications throughout the season to protect peanuts, and staying ahead of it can be an exhausting job. Growers can now benefit from a breakthrough weapon to help stomp out leaf spot and ensure maximum yield potential. Syngenta designed Miravis® fungicide, with Adepidyn® fungicide, to deliver more power and stamina and provide growers with a once-in-a-lifetime opportunity to radically change how they manage leaf spot.
EXPERIENCE THE FUTURE WITH MIRAVIS

For growers who want relief from the unrelenting pressure of leaf spot, Miravis will deliver powerful disease control with one of the highest-performing SDHI modes of action ever discovered. The unique performance of Miravis provides game-changing power and increased stamina for up to 28 days of residual control – doubling the typical 14-day spray interval that growers have worked with for generations. With Miravis, growers can achieve better yield and ROI potential compared to previous leaf spot fungicides, while enjoying more flexibility and efficiency in their disease management programs.

MORE POWER, MORE STAMINA, BETTER PERFORMANCE

More power from Adepidyn fungicide, the highest-performing carboxamide molecule with an SDHI mode of action available to growers

Improved stamina from a reservoir of active ingredient within the leaf’s wax layer that withstands rain and degradation for longer-lasting control

Even distribution within the leaf for consistent protection

MIRAVIS TAKES LEAF SPOT CONTROL TO THE NEXT LEVEL WITH:

Disease present: End of season leaf spot
FAD3633A3-2018US. Mean of 8 trials across Alabama, Florida, Georgia
GROW STRONGER PEANUT PLANTS

With both excellent disease control and plant-health benefits, Miravis helps peanuts develop stronger vines that better withstand the unexpected. This helps prevent vine decay and yield loss.

IN THE TRIAL BELOW,

25 days after digging and 6 inches of rain,

the Miravis spray programs yielded up to 1,124 MORE pounds of peanuts and preserved vine integrity better than the nearest competitive program.

25 days between digging and picking plus 6 inches of rain Fungicide trial, Calhoun County, Georgia 2018
NO MATTER HOW THE SEASON PROGRESSES,
the improved disease control and plant health from Miravis fungicide is unmistakable.
