Only Acuron® corn herbicide unlocks your full yield potential. When used in a preemergence application at full label rates, Acuron lets you discover the extra bushels no other herbicide can.

FIND 5-15 MORE BUSHELS AN ACRE THAN WITH ANY OTHER HERBICIDE.

Only Acuron® corn herbicide unlocks your full yield potential. When used in a preemergence application at full label rates, Acuron lets you discover the extra bushels no other herbicide can.

BETTER WEED CONTROL EQUALS HIGHER YIELD POTENTIAL

Outyielded Resicore® by 5.6 Bu/A*
Outyielded Corvus® by 10.4 Bu/A*
Outyielded Verdict® by 16.5 Bu/A*
Outyielded SureStart® II by 17.5 Bu/A*

Acuron yield advantage range based on 2016 Syngenta and university replicated trials comparing Acuron®; Corvus®, Resicore®, SureStart® II and Verdict® applied preemergence at full label rates. For more information on Acuron® versus an individual product, ask your Syngenta representative.

CLEAN, WEED-FREE FIELDS EQUAL MORE BUSHELS AND MORE MONEY

Acuron controls tough, yield-robbing weeds other products miss. Less weed competition translates into more nutrients, sunlight and water available for the growing corn crop, which leads to more bushels and extra revenue potential.

ACURON OUTPERFORMS COMPETITORS 71 DAYS AFTER PREEMERGENCE APPLICATION

Acuron 3 qt/A
Resicore 2.5 qt/A
Corvus 5.6 fl oz/A + atrazine 0.66 qt/A
Verdict 14 fl oz/A

ONLY ACURON UNLOCKS YOUR FULL YIELD POTENTIAL

What is it about Acuron that enables it to outperform and outyield all other corn herbicides? It’s the powerful combination of highly effective, broad-spectrum weed control plus proven crop safety.

UNMATCHED WEED CONTROL

Acuron contains four active ingredients, including the unique component bicyclopyrone, which enable it to protect corn from tough, yield-robbing weeds better than any other herbicide.

PROVEN CROP SAFETY

Acuron has been proven to provide excellent pre and post-emergence crop safety across a wide range of soil types, weather conditions and plant genetics.

Its crop safety enables application flexibility from 28 days preplant, including burndown, up to 12-inch corn

Even in cool, wet conditions, Acuron is unlikely to ding your corn when used according to the label

Acuron is a dependable, easy-to-use formulation that contains a proven crop safener, benoxacor, and the encapsulated S-metolachlor isomer for improved crop safety

To start finding more bushels, ask your local Syngenta retailer for Acuron, or visit Acuron-Herbicide.com.
