

# Foxfire Herbicide

## Delivering tough grass control for Northern Plains wheat growers

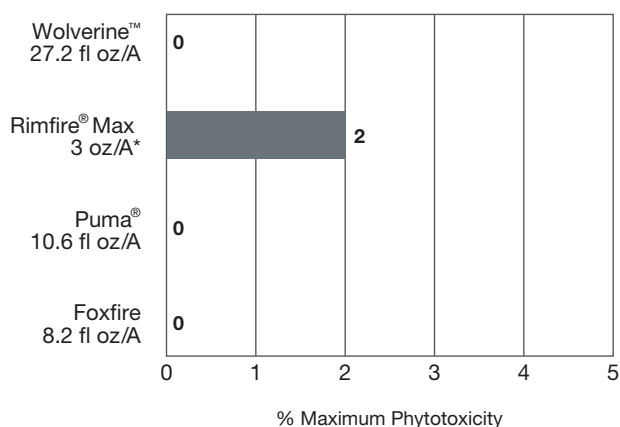

Foxfire™ herbicide is specifically designed for the Northern Plains market to help growers manage the complexity of weed control by delivering enhanced control of foxtails and other grass weeds in spring wheat (excluding durum) and winter wheat. Foxfire can be tank mixed with broadleaf herbicides to meet the weed control needs of each field and maximize yield and profit potential. In addition, Foxfire can be tank mixed with fungicides and insecticides to reduce trips across the field, saving growers time and money.

- Delivers a systemic, post-emergence weed management tool designed for the Northern Plains wheat market
- Combines our industry-leading mixed-grass control chemistry in Axial® brand herbicides with fenoxaprop to control core grass weed challenges, including foxtails, wild and volunteer oats, and barnyardgrass
- Provides freedom to choose best broadleaf herbicide tank-mix partner to build one-pass weed control solutions to meet field needs without injuring the crop
- Offers the option to apply early to maximize crop yields by reducing early-season weed competition
- Maintains flexibility to tank mix with insecticides and fungicides

### Weeds Controlled

- Green foxtail
- Yellow foxtail
- Giant foxtail
- Wild oat
- Volunteer oat
- Barnyardgrass
- Wild proso millet

## Crop Safety to Wheat

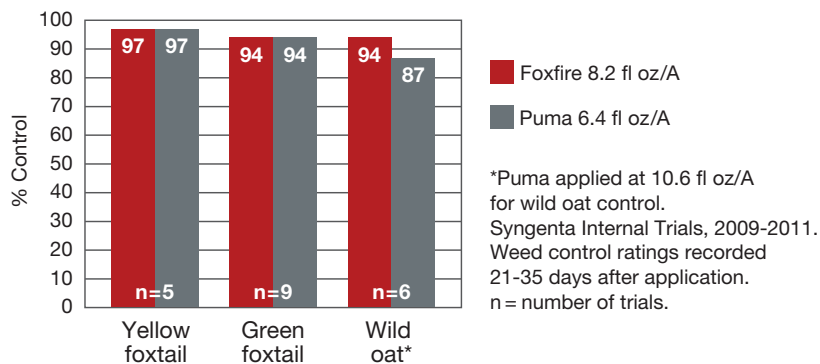

\*Includes Basic Blend at 1% v/v. Number of trials = 14.  
Syngenta Internal Trials, 2009-2011.  
Maximum crop injury recorded 10-14 days after application.

## Use Recommendations

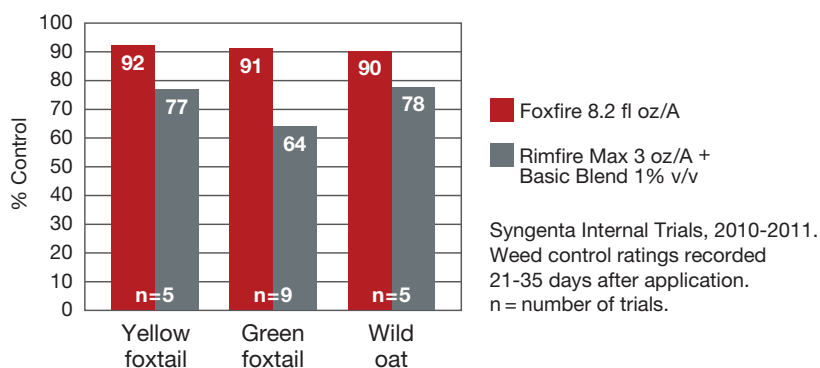

- Single Use Rate: 8.2 fl oz/A
- Crop Application Timing:  
2-leaf stage to pre-boot stage
- Weed Application Timing:
  - Green, yellow, giant foxtail;  
barnyardgrass; wild proso millet:  
1-5 leaf stage before  
emergence of 3rd tiller
  - Wild oat, volunteer oat:  
1-6 leaf stage before  
emergence of 4th tiller
