The Right Choice for Your Grape Disease Program

Aprovia® fungicide is the next generation long-lasting fungicide for grapes from Syngenta. It delivers enhanced, broad-spectrum disease control with the power of one active ingredient – Solatenol® fungicide. Aprovia inhibits infection and helps prevent the spread of existing disease, to provide excellent control of powdery mildew at a low use rate. Aprovia also demonstrates excellent activity on many other diseases in grapes, such as black rot and leaf spot.

As a solo product, Aprovia enables flexibility when choosing tank-mix partners and fits well in rotation with products such as Inspire Super® fungicide and other modes of action to create a full-season disease control program for resistance management.

Key Features
• Breakthrough active ingredient – Solatenol fungicide
• Excellent powdery mildew control
• Broad spectrum activity
• Flexible application timing
• Compatible with other products

Diseases Controlled
• Powdery Mildew
• Alternaria rot
• Angular leaf spot
• Anthracnose
• Black rot
• Leaf blight
• Phomopsis cane and leaf spot

Timing and Usage
Growers can rely on Aprovia to help prevent diseases in their vineyards when correct application timing and usage rates are followed. Aprovia should be used at a rate of 7 to 10.5 oz/A every 7 to 14 days.

• For Powdery Mildew, begin applications at bud break with a recommended 14 day interval.
• For Phomopsis, begin applications at bud break, before shoots are 0.5 inches in length.
  Apply again when shoots are 5 to 6 inches in length.
