

Miravis Top fungicide for soybeans

Technical overview:

Engineered for the unique disease pressure Southern soybean growers face, Miravis[®] Top fungicide is a combination of difenoconazole (FRAC group 3) and Adepidyn[®] fungicide, the latest broad-spectrum SDHI molecule from Syngenta.

A novel carboxamide molecule within FRAC group 7 and one of the most powerful SDHIs ever created, Adepidyn fungicide is the first SDHI to offer plant-health benefits and equally outstanding disease control.

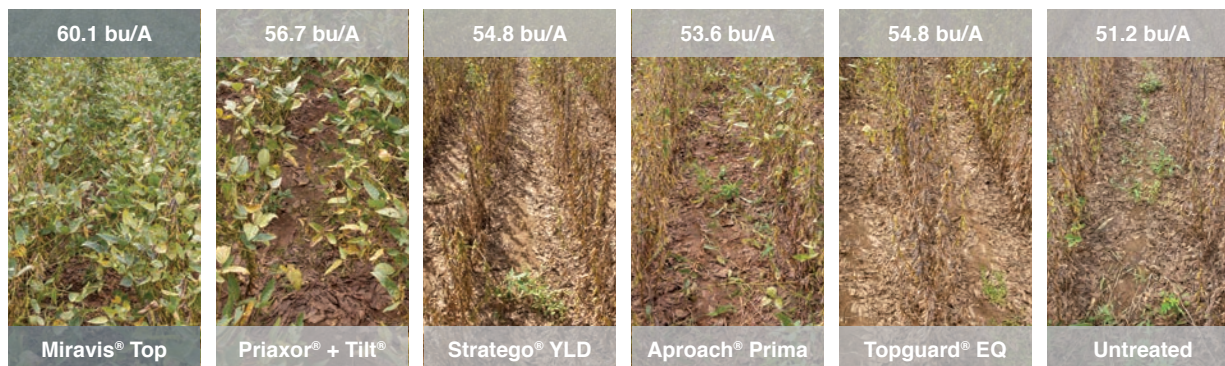

Technical features:

- Built with Adepidyn fungicide – one of the most potent molecules ever discovered – Miravis Top provides superior disease control
- Designed to control a broader spectrum of diseases for longer, Miravis Top has excellent affinity for plant surfaces for longer residual control of key leaf spots, blights and soilborne diseases
- Created to rapidly establish a reservoir within the plant's wax layer, Miravis Top gets to work fast and tolerates the unexpected to provide superior protection from application through harvest

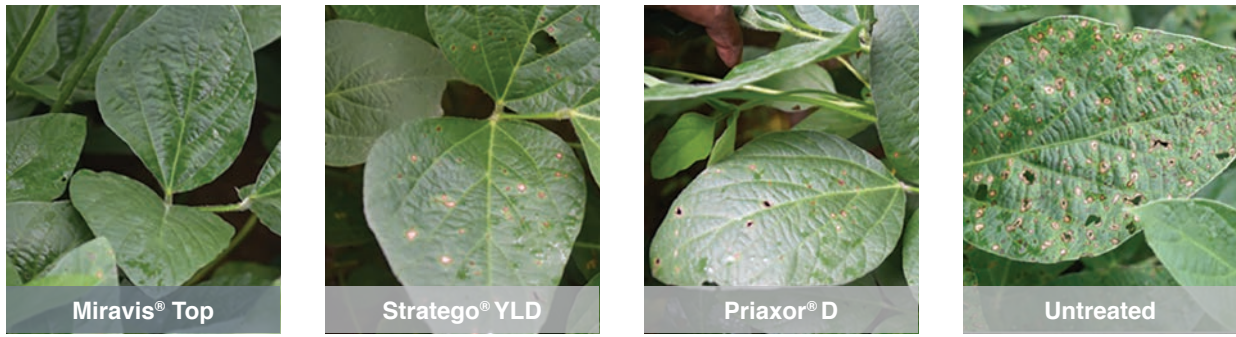

Diseases controlled:

- Aerial web blight
- Alternaria leaf spot
- Anthracnose
- Brown spot
- Frogeye leaf spot (strobilurin-resistant + susceptible)
- Powdery mildew
- Target spot
- White mold suppression

Miravis Top outperforms competitive brands against target spot and brown spot

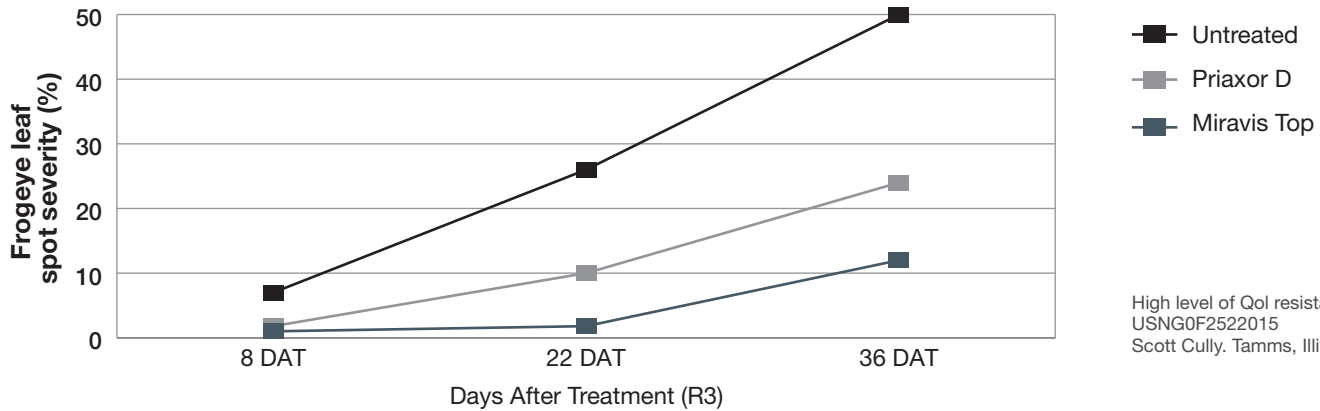

Miravis Top efficacy on strobilurin-resistant frogeye leaf spot

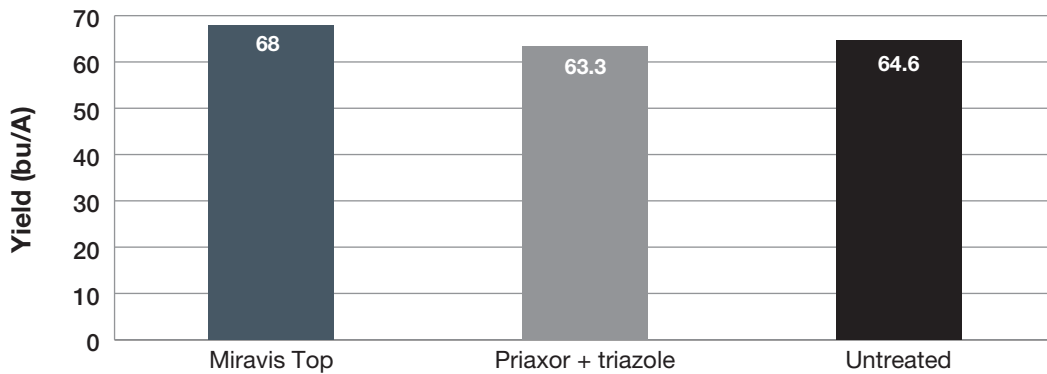

Rend Lake, Illinois 2016

Miravis Top efficacy on strobilurin-resistant frogeye leaf spot vs. Priaxor D

High level of Qol resistance
