# Superior Disease Control for Wine and Table Grapes

When it comes to disease protection for wine and table grapes, Inspire Super® fungicide offers an unsurpassed and convenient disease management tool. With up to 21 days of residual control, Inspire Super provides broad-spectrum activity beyond what any single product can deliver.

## Highlights

- Excellent activity on powdery mildew and Botrytis
- Complementary to strobilurin and SDHI mixtures
- Great resistance management tool
- Outstanding residual control
- Proven to have no effect on fermentation and no taint of wine

## Trusted by Industry Leaders

These pest control advisors have seen first-hand the benefits of recommending Inspire Super fungicide on grapes.

*"Inspire Super is definitely a tool that we use. I use Inspire Super a couple of times during a season, especially on those tough powdery mildew years. It's a product that I would use in tough years and in years when we don't really have that much pressure."*

Kurt Martin—Helena Chemical  
Exeter, CA

*"There was pretty good disease pressure this year, and the fields that I used Inspire Super came out very clean. Wineries were very happy with it, so I was very happy with it. It's a very good product that performs well compared to other products. The price is also very competitive so you're getting a good bang for your buck."*

Joel Noah—Crop Production Services  
Stockton, CA

"I started using Inspire Super on grapes to fight off Botrytis during bloom and to get powdery mildew under control. This year, we didn't have too many rain events in Central Valley California, so the mildew index is high because of the humidity and heat. I like the fact you're mixing up chemistries with Inspire Super and getting more options in my spray throughout the season."

David Vieira—Helena Chemical  
Exeter, CA

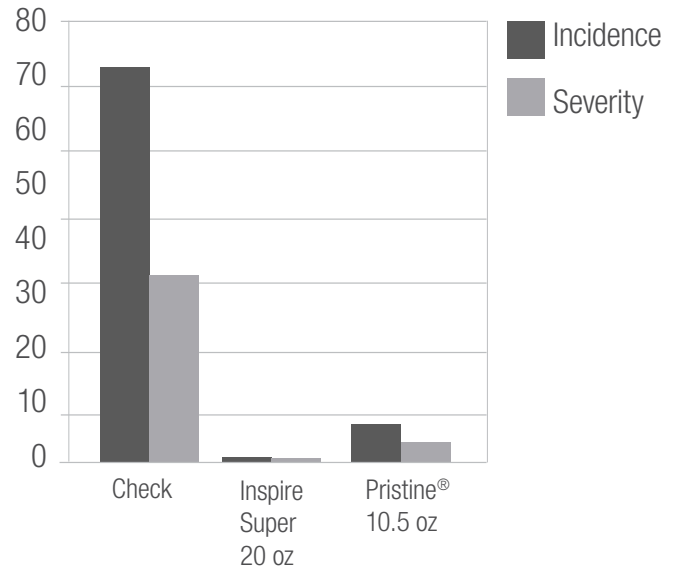

"I first recommended Inspire Super on grapes this year because a grower wanted to take care of some rot issues to help increase their tonnage. The grower ended up with no rot, and I think the Inspire Super is a big part of that. My growers have been really happy with the way Inspire Super has worked out this year with little to no rot. With Inspire Super, I tell growers that you're hitting two birds with one stone with the bunch rot control and the mildew control. If we have another disease-filled year, I think Inspire Super is really going to help out. It's a big thing being able to help control that, especially in tight bunches like chardonnay or Zinfandel."

Kelly Devine—Crop Production Services  
Stockton, CA

"I started using Inspire Super on grapes two years ago when it first came to market for the efficacy, the economics and the convenience for the customers. There's an extreme Botrytis pressure where we're growing, so we use Inspire Super at early bloom. Buying Inspire Super economically justifies the application of that product in grapes. In addition, the convenience and ease of use of the product minimizes potential for mistakes."

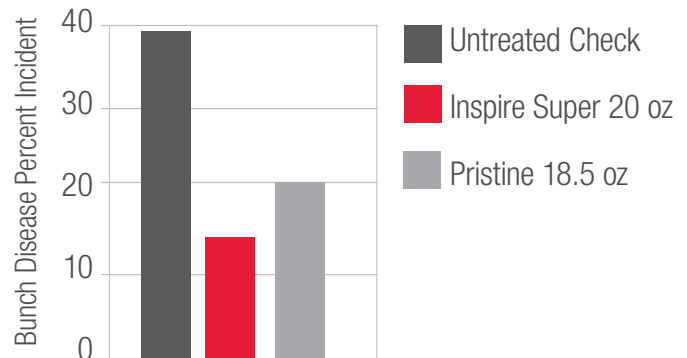

Armon Azevedo—Wilbur Ellis  
Healdsburg, CA

## Powdery Mildew

Location: Lodi, CA, Variety: Chardonnay, Researcher: Hugie  
Applications: 5/8, 6/13 alt Quintec 5/22, 7/2  
Evaluation: 7/7 60 DAIA

## Botrytis Bunch Rot

USWC0F8022008; CA; Bettiga: Riesling  
Applications: Three in alternation with Elevate alb (B) Full bloom (A), bunch pre-closure(B) and version(C)
