Land.db® software in use on a computer

Technology

Land.db® is the secure, cloud-based farm management software within the AgriEdge Excelsior program that helps growers digitally organize their data across devices to make informed decisions. Developed by growers for growers, the user-friendly software collects and analyzes data to maximize efficiency.

Notable Features:

- Empowers the grower with data ownership - the data is secure and only available to the grower unless permission is granted to outside parties
- Understands profitability at a field level
- Creates crop plans with operations' agronomic advisor
- Manages on-farm inventory

Service

Farms receive a personalized and dedicated service team of AgriEdge Specialists and Ag Connections professionals for set-up, training and season-long support and guidance.

Support Perks:

- Agronomic recommendations and crop plans
- Product training on seed, crop protection and seed treatments
- Analytics and reports to support farm management decisions
- Regional expertise from AgriEdge Excelsior specialists
- Software experts who also understand farming

Portfolio

AgriEdge Excelsior growers have access to the full portfolio of Syngenta seed, crop protection and Seedcare products to further enhance crop quality and yields year after year. Growers within the program are also able to stay well-informed on the accessibility of the suite of innovative products in development.

PORTFOLIO

Risk Management

To empower growers who invest in innovation that improves the yields and quality of crops, AgriEdge Excelsior offers a customized cost sharing program to help migrate the risk of those investments. AgriEdge Excelsior growers can also earn 0% financing on eligible Syngenta seed, crop protection and Seedcare brands through Rabo AgriFinancing.

Additionally, the program manages risk with its intense commitment to data privacy. Syngenta proudly supports Agriculture Technology Providers "Privacy and Security Principles for Farm Data" of American Farm Bureau Federation. Privacy practices are shaped from input and governance from Grower Advisory as well as are verified and audited by third-party experts.
