# TIME'S UP FOR TOUGH WEEDS

## Introducing Tavium Plus VaporGrip Technology for Soybeans

The clock is ticking on weed management, and adding to the urgency is the rapid spread of tough weeds and resistance. With Tavium<sup>®</sup> Plus VaporGrip<sup>®</sup> Technology herbicide, soybeans are protected from weeds during a key time in the growing season. **Tavium is the first dicamba premix herbicide approved for use in dicamba-tolerant soybeans.** It offers the effectiveness of dicamba and, with the addition of S-metolachlor, up to three weeks longer residual control than dicamba alone.

Tavium delivers **contact and long-lasting residual control** of key broadleaf and grass weeds in Roundup Ready 2 Xtend<sup>®</sup> Soybeans. Tavium is a powerful premix combination of two effective sites of action (SOAs). The contact control of dicamba helps manage the weeds you see, and the residual control of S-metolachlor helps protect you from the weeds you don't see yet.

#### When every minute counts, why Tavium?

- Built-in resistance management and convenience as a premix
- Two effective SOAs for contact and residual control to manage key ALS-, PPO- and glyphosate-resistant weeds
- Flexible application from preplant through early post-emergence
- Crop safe and an easy fit in various tillage systems and geographies

- Can be tank mixed with several different herbicide offerings, **expanding the options for weed resistance management**
- When used in a program with a strong preemergence herbicide, such as Boundary<sup>®</sup> 6.5 EC, BroadAxe<sup>®</sup> XC or Prefix<sup>®</sup> herbicides, it provides the best chance of a onepass post-emergence herbicide application
- Use rate of **3.53 pt/A**
- Consistent yield increase of 2 bu/A compared to dicamba alone<sup>1</sup>

The clock is ticking on resistance management

Tavium is most effective when used as part of a season-long weed management program combined with cultural practices. A burndown application plus a preemergence residual herbicide with multiple effective SOAs – such as **Boundary 6.5 EC**, **BroadAxe XC** or **Prefix** – followed by an early postemergence application of Tavium can help **reduce the** weed seed bank, increase diversity within a herbicide program and fight resistance.

12017 university trials: Delaware, Illinois, Indiana, Iowa, Kansas, Kentucky, Mississippi, Missouri, Ohio, Nebraska, Tennessee, Wisconsin

Management of more than 70 annual grass and broadleaf weeds, including:

#### **Broadleaf weeds:**

- Palmer amaranth
- Waterhemp
- Horseweed (marestail)
- Morningglory spp.
- Ragweed spp.
- Pigweed spp.
- Kochia
- Lambsquarters
- Cocklebur
- Velvetleaf
- Russian thistle

#### Grass weeds:

- Barnyard grass
- Crabgrass spp.
- Foxtail spp.

### **Extended residual control**
