Enhancing Biodiversity

Most farms include marginal, less productive land, which can provide crucial habitats for wildlife. Syngenta's global Operation Pollinator program supports growers in their efforts to convert marginal farmland into corridors of vegetation that provide habitat for foraging environments for pollinators and other wildlife.

t corridors connect

Man-made pollinator habitats show significant increases in pollinator numbers within S. Up to 600% three years. increase **10-fold** gain **12-fold gain** Planting strips of vegetation along the edges of farm properties and waterways helps prevent runoff and retain soil and nutrients, including potassium (K), nitrogen (N) and phosphorus (P).
