Miravis® fungicide delivers excellent control of key diseases in cherry trees with more power, spectrum and stamina. Containing Adepidyn® fungicide, a broad-spectrum carboxamide chemistry with an SDHI mode of action, Miravis sets a new standard for performance and length of residual control to help cherry trees achieve maximum yield potential.

**MIRAVIS ADVANTAGES**

- Delivers exceptional durability for extended residual control
- Provides high potency for powerful preventive control
- Accumulates heavily into the wax layers and translocates through the leaves
- Remains stable on the leaf surface for even distribution and protection

**Controls key diseases**

- Gray mold
- Powdery mildew
