

DID YOU KNOW?

Waterhemp and **Palmer amaranth**, both species of pigweed, can deposit **10,000 to 1 million seeds per plant** into the soil.

Marestail, one of the first glyphosate-resistant weeds identified in U.S. row crops, produces seeds that can be **transported by the wind**.

Morningglory seeds have extremely hard coats allowing them to remain **viable in the soil for more than 50 years**.
